

Animal Experimentation

Title: Animal Experimentation

Author: [Sarah White](#)

Grade Level: 10–12

Summary of Lesson

Students will examine the benefits and drawbacks of animal experimentation and write a position paper on the topic.

Focus Question

Should humans use animals in psychological research?

Database: *Opposing Viewpoints in Context*

Procedures:

Steps/Activities by the teacher:

- In a class discussion, ask students what they think about animal experimentation.
- Explain that animal experimentation is often used in psychological research. An example of this might be Ivan Pavlov's experiments with dogs.
- Divide the class into two camps: one side should be for psychological experimentation on animals and the other should be against animal experimentation.
- Allow students time to access the *Opposing Viewpoints in Context*. Direct students to the Animal Experimentation topic page. The students should look for articles that support their assigned position on this issue.
- Ask students to find at least three articles that support their positions.
- When students have finished, they should split into their respective camps and try to answer the following prompt: "Agree or disagree: is it necessary and ethical for humans to use animals in psychological research?"
- When each camp has finished their discussions and answered the prompt, each camp should elect a volunteer to present their argument to the class.
- In a class discussion, talk about the advantages and disadvantages of using animals in psychological experiments. Ask students to consider how using animals in experiments has an impact on people.

Steps/Activities by student(s):

- Think about animal experimentation. Do you agree or disagree with using animals in psychological experiments?
- Your teacher will break you into two camps. One side will be for animal experimentation and the other side will be against animal experimentation.
- Access the *Opposing Viewpoints in Context* and select Animal Experimentation from the topic page. Find at least three articles that support your assigned position.

Communication Susanna Hornig Priest, 2010-07-14. The explosion of scientific information is exacerbating the information gap between richer, poorer, educated, less educated publics. The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind. This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences. Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments. Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences. Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research. Science communication often in new forms must expand to meet all these needs. Providing a comprehensive introduction to students, professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each. For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses. Even so those entering the field rarely will have a comprehensive background in both science and communication studies. This circumstance underscores the importance of compiling useful reference materials. The *Encyclopedia of Science and Technology Communication* presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources. Science communicators need to understand more than how to interpret scientific facts and conclusions; they need to understand basic elements of the politics, sociology and philosophy of science as well as relevant media and communication theory, principles of risk communication, new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges. This work will help to develop and enhance such understanding as it addresses these
