

Classify each triangle as *equilateral*, *isosceles*, or *scalene*.

3. $\triangle ABD$

equilateral

4. $\triangle BED$

Isosceles

For the triangle, find x and the measure of each side.

5. $\triangle LMN$ is an isosceles triangle, with $LM = LN$, $LM = 3x - 2$, $LN = 2x + 1$, and $MN = 5x - 2$.

$$3x - 2 = 2x + 1$$

$$x = 3$$

4.2 - Triangle Angle Sum (180 rule)

Find each measure.

6. $m\angle 1$

$$180 - 101 - 76 = 104$$

7. $m\angle 4$

$$180 - (65 + 70) = 45$$

8. $m\angle 3$

$$180 - 115 = 65$$

9. $m\angle 2$

$$36 + 65 = 101$$

4.3 Congruent Triangles

Show that the triangles are congruent by identifying all congruent corresponding parts. Then write a congruence statement for the triangles.

10.

$$\begin{aligned} \overline{MN} &\cong \overline{PN} \\ \overline{NL} &\cong \overline{NQ} \\ \angle MNL &\cong \angle PNQ \end{aligned}$$

$$\begin{aligned} \angle M &\cong \angle P \\ \angle L &\cong \angle Q \\ \angle MNL &\cong \angle PNQ \end{aligned}$$

Two-Dimensional Conformal Geometry and Vertex Operator Algebras Yi-Zhi Huang,2012-12-06 The theory of vertex operator algebras and their representations has been showing its power in the solution of concrete mathematical problems and in the understanding of conceptual but subtle mathematical and physical structures of conformal field theories Much of the recent progress has deep connections with complex analysis and conformal geometry Future developments especially constructions and studies of higher genus theories will need a solid geometric theory of vertex operator algebras Back in 1986 Manin already observed in Man that the quantum theory of super strings existed in some sense in two entirely different mathematical fields Under canonical quantization this theory appeared to a mathematician as the representation theories of the Heisenberg Virasoro and affine Kac Moody algebras and their superextensions Quantization with the help of the Polyakov path integral led on the other hand to the analytic theory of algebraic super curves and their moduli spaces to invariants of the type of the analytic curvature and so on He pointed out further that establishing direct mathematical

connections between these two forms of a single theory was a big and important problem On the one hand the theory of vertex operator algebras and their representations unifies and considerably extends the representation theories of the Heisenberg Virasoro and Kac Moody algebras and their superextensions *Geometry: Word Problems Vol. 4 Gr. 3-5* Mary Rosenberg,2013-06-01 This is the chapter slice Word Problems Vol 4 Gr 3 5 from the full lesson plan Geometry For grades 3 5 our resource meets the geometry concepts addressed by the NCTM standards and encourages the students to learn and review the concepts in unique ways Each task sheet is organized around a central problem taken from real life experiences of the students The pages of this resource contain a variety in terms of levels of difficulty and content so as to provide students with a variety of differentiated learning opportunities Included in our resource are activities on two and three dimensional shapes fractions coordinate points and composing and decomposing shapes The task sheets offer space for reflection and opportunity for the appropriate use of technology Also contained are assessment and standards rubrics review sheets color activity posters and bonus worksheets All of our content meets the Common Core State Standards and are written to Bloom s Taxonomy STEM and NCTM standards *Geometry: Word Problems Vol. 5 Gr. 3-5* Mary Rosenberg,2013-06-01 This is the chapter slice Word Problems Vol 5 Gr 3 5 from the full lesson plan Geometry For grades 3 5 our resource meets the geometry concepts addressed by the NCTM standards and encourages the students to learn and review the concepts in unique ways Each task sheet is organized around a central problem taken from real life experiences of the students The pages of this resource contain a variety in terms of levels of difficulty and content so as to provide students with a variety of differentiated learning opportunities Included in our resource are activities on two and three dimensional shapes fractions coordinate points and composing and decomposing shapes The task sheets offer space for reflection and opportunity for the appropriate use of technology Also contained are assessment and standards rubrics review sheets color activity posters and bonus worksheets All of our content meets the Common Core State Standards and are written to Bloom s Taxonomy STEM and NCTM standards *Geometry Labs* Henri Picciotto,1999 Geometry Labs is a book of hands on activities that use manipulatives to teach important ideas in geometry These 78 activities have enough depth to provide excellent opportunities for discussion and reflection in both middle school and high school classrooms
