A scientist wishes to create a population of bugs to match a certain background. Which of the following bugs should be bred to create offspring that have the genotype shown below? - -A. A and B

-Which of the following is not a characteristic of natural selection? - -C. Breeding pairs are chosen by humans.

-Which of the following statements is true about artificial selection? - -A. Breeders can control which animals mate.

-In this simulation, the mutation rate is the probability of a single gene mutating in an offspring bug. Assuming each offspring bug has six genes, which of the following snapshots most likely corresponds to a mutation rate of 4%? - -C. Image C

-A scientist used radiation to change the mutation rates of a population of bugs. He then measured how many generations it took for bugs with different mutation rates to adapt to a new background by natural selection. On the graph below, the x-axis represents the mutation rate, and the y-axis represents the number of generations it took for the bugs to reach an average fitness of 90%. Which of the following statements is most accurate?
- -B. Adaptation occurred more quickly as the mutation rate increased. However, this effect was relatively small for mutation rates above 1%.

Nature Versus Natural Selection

Adaptation and Natural Selection

George Christopher Williams,2018-10-30 Biological evolution is a fact but the many conflicting theories of evolution remain controversial even today When Adaptation and Natural Selection was first published in 1966 it struck a powerful blow against those who argued for the concept of group selection the idea that evolution acts to select entire species rather than individuals Williams s famous work in favor of simple Darwinism over group selection has become a classic of science literature valued for its thorough and convincing argument and its relevance to many fields outside of biology Now with a new foreword by Richard Dawkins Adaptation and Natural Selection is an essential text for understanding the nature of scientific debate

Natural Selection J. Phil Gibson,Terri R. Gibson,2009 In his groundbreaking book Natural Selection Charles Darwin explained his theory that evolution is driven by adaptation of species to their environmental surroundings From the tiniest microbe to the largest whale all organisms have changed over vast expanses of time due to the forces of natural selection This new title in the Science Foundations series provides an overview of the processes and causes that drive natural selection and the principles that explain how it operates using numerous diverse organisms as examples Natural Selection promotes a solid understanding of how organisms change over the course of generations and how current biodiversity came to be
