Administrators Guide For Informix Dynamic Server:

Administrator's Guide for Informix Dynamic Server, 1998 **IBM Informix Developer's Handbook** Whei-Jen Chen, Krishna Doddi, Manoj Ghogale, David Jay, Javier Sagrera, IBM Redbooks, 2011-01-17 IBM Informix is a low administration easy to use and embeddable database that is ideal for application development. It supports a wide range of development platforms such as Java™, .NET, PHP and web services enabling developers to build database applications in the language of their choice. Informix is designed to handle RDBMS data and XML without modification and can be extended easily to handle new data sets. This IBM Redbooks publication provides fundamentals of Informix application development. It covers the Informix Client installation and configuration for application development environments. It discusses the skills and techniques for building Informix applications with Java, ESQL/C, OLE DB, .NET, PHP, Ruby on Rails, DataBlade and Hibernate. The book uses code examples to demonstrate how to develop an Informix application with various drivers, APIs and interfaces. It also provides application development troubleshooting and considerations for performance. This book is intended for developers who use IBM Informix for application development. Although some of the topics that we discuss are highly technical, the information in the book might also be helpful for managers or database administrators who are looking to better understand their Informix development environment.

Informix-online Dynamic Server, 1996* *Embedding IBM Informix* Whei-Jen Chen, Oluwatosin Ajayi, Mirav Kapadia, Alexander Koerner, Jacques Roy, Dick Snoke, IBM Redbooks, 2011-02-17 In this IBM Redbooks publication we discuss and describe the capabilities for embedding Informix into applications and software. We introduce the technological architecture and describe several of the functions and features that support Informix as a robust and powerful embeddable DBMS. Many of these features are unique in the industry today, enabling clients to create a business advantage. The Informix database server can support the requirements of an embeddable DBMS and is doing so for many companies today. The low administration requirements of the Informix database server enable clients to deploy thousands of Informix instances embedded in applications in locations where there are no technical resources to support the database. The real requirement is for applications with embedded databases that require little or no administration. Take minimum storage resources, have excellent performance and are highly reliable. As a mature and reliable DBMS, the Informix database server works well with small, growing and large databases and meets the key requirements for embedded databases which include the ability to execute without needing any configuration or other DBA administrative activities and the flexibility to work on all of the platforms commonly used in the marketplace today.
