Actor Networks of Planning Yvonne Rydin, Laura Tate, 2016-02-12 Planning is centrally focused on places which are significant to people including both the built and natural environments In making changes to these places planning outcomes inevitably benefit some and disadvantage others It is perhaps surprising that Actor Network Theory ANT has only recently been considered as an appropriate lens through which to understand planning practice This book brings together an international range of contributors to explore such potential of ANT in more detail While it can be thought of as a subset of complexity theory given its appreciation for non linear processes and responses ANT has its roots in the sociology of scientific and technology studies ANT now comprises a rich set of concepts that can be applied in research theoretical and empirical It is a relational approach that posits a radical symmetry between social and material actors or actants It suggests the importance of dynamic processes by which networks of relationships become formed shift and have effect And while not inherently normative ANT has the potential to strengthen other more normative domains of planning theory through its unique analytical lens However this requires theoretical and empirical work and the papers in this volume undertake such work This is the first volume to provide a full consideration of

how ANT can contribute to planning studies and suggests a research agenda for conceptual development and empirical application of the theory Advanced Models and Tools for Effective Decision Making Under Uncertainty and Risk Contexts González-Prida, Vicente, Carnero, María Carmen, 2020-09-04 Business industries depend on advanced models and tools that provide an optimal and objective decision making process ultimately guaranteeing improved competitiveness reducing risk and eliminating uncertainty Thanks in part to the digital era of the modern world reducing these conditions has become much more manageable Advanced Models and Tools for Effective Decision Making Under Uncertainty and Risk Contexts provides research exploring the theoretical and practical aspects of effective decision making based not only on mathematical techniques but also on those technological tools that are available nowadays in the Fourth Industrial Revolution Featuring coverage on a broad range of topics such as industrial informatics knowledge management and production planning this book is ideally designed for decision makers researchers engineers academicians and students

Van Driessche, Matthias Kellermeier, Liane G. Benning, Denis Gebauer, 2016-12-20 In the last decade numerous studies have demonstrated the existence of alternative pathways to nucleation and crystallisation that oppose the classical view Such proposed scenarios include multistage reactions proceeding via various precursor species and/or intermediate phases The aim of this book is to review and discuss these recent advances in our understanding of the early stages of mineralisation through a series of contributions that address both experimental and theoretical studies about the formation and nature of initial precursor species e.g. prenucleation clusters dense liquid phases amorphous nanoparticles etc as well as their transformations leading to the stable mineral phase Several chapters are devoted to cutting edge analytical techniques used for investigating the above processes in situ in real time and at conditions relevant to both natural and industrial processes At the end of the book the editors summarize the key questions that still need to be addressed in order to establish a complete picture of the nucleation and growth processes involved during the formation of minerals
