Advanced Generation Systems Ibrahim Dincer:

Advanced Power Generation Systems Ibrahim Dincer, Calin Zamfirescu, 2014-07-15 Advanced Power Generation Systems examines the full range of advanced multiple output thermodynamic cycles that can enable more sustainable and efficient power production from traditional methods as well as driving the significant gains available from renewable sources. These advanced cycles can harness the by products of one power generation effort such as electricity production to simultaneously create additional energy outputs such as heat or refrigeration. Gas turbine based and industrial waste heat recovery based combined cogeneration and trigeneration cycles are considered in depth along with Syngas combustion engines, hybrid SOFC gas turbine engines and other thermodynamically efficient and environmentally conscious generation technologies. The uses of solar power, biomass, hydrogen and fuel cells in advanced power generation are considered within both hybrid and dedicated systems. The detailed energy and exergy analysis of each type of system provided by globally recognized author Dr Ibrahim Dincer will inform effective and efficient design choices while emphasizing the pivotal role of new methodologies and models for performance assessment of existing systems. This unique resource gathers information from thermodynamics, fluid mechanics, heat transfer and energy system design to provide a single source guide to solving practical power engineering problems. The only complete source of info on the whole array of multiple output thermodynamic cycles covering all the design options for environmentally conscious combined production of electric power, heat and refrigeration. Offers crucial instruction on realizing more efficiency in traditional power generation systems and on implementing renewable technologies including solar, hydrogen, fuel cells and biomass. Each cycle description clarified through schematic diagrams and linked to sustainable development scenarios through detailed energy, exergy and efficiency analyses. Case studies and examples demonstrate how novel systems and performance assessment methods function in practice.

Optimization of Energy Systems Ibrahim Dincer, Marc A. Rosen, Pouria Ahmadi, 2017-05-15 An essential resource for optimizing energy systems to enhance design capability, performance and sustainability. Optimization of Energy Systems comprehensively describes the thermodynamic modelling, analysis and optimization of numerous types of energy systems in various applications. It provides a new understanding of the system and the process of defining proper objective functions for determination of the most suitable design parameters for achieving enhanced efficiency, cost effectiveness and sustainability. Beginning with a general summary of thermodynamics optimization techniques and optimization methods for thermal components, the book goes on to describe how to determine the most appropriate design parameters for more complex energy systems using various optimization methods. The results of each chapter provide potential tools for design, analysis, performance improvement and greenhouse gas emissions reduction. Key features: Comprehensive coverage of the modelling, analysis and optimization of many energy systems for a variety of applications. Examples, practical applications and case studies to put theory into practice. Study problems at the end of each chapter that foster critical thinking and skill.

development Written in an easy to follow style starting with simple systems and moving to advanced energy systems and their complexities A unique resource for understanding cutting edge research in the thermodynamic analysis and optimization of a wide range of energy systems Optimization of Energy Systems is suitable for graduate and senior undergraduate students researchers engineers practitioners and scientists in the area of energy systems *Integrated Absorption Refrigeration Systems* Ibrahim Dincer,Tahir Abdul Hussain Ratlamwala,2016-08-18 This book provides a detailed analysis of absorption refrigeration systems covering single effect to multi effect systems and their applications Both the first and second laws of thermodynamics are discussed in relation to refrigeration systems to show how system performance differs from one law to another Comparative energy and exergy analyses and assessments of single effect double effect triple effect and quadruple effect absorption refrigeration system are performed to illustrate the impact of an increase in the number of effects on system performance In particular the second law exergy formulation for absorption refrigeration systems rarely discussed by other works is covered in detail Integrated Absorption Refrigeration Systems will help researchers students and instructors in the formulation of energy and exergy efficiency equations for absorption refrigeration systems
