Baker, 2013-12-12

The Radiology Department is a pivotal part of any acute and or comprehensive health care facility The radiologist can no longer just hide out there Matters of imaging are often public concerns larger in scope than just the scheduling and managing of a series of image tests Rather radiology is expensive often intrusive and in some areas earnestly and endlessly controversial A radiologist must be attuned to these often confounding contingencies Two recent developments in the monitoring of education of radiologists can be impacted by the content of this book For trainees in Radiology and for that matter for all trainees in every medical specialty in the U S a new accreditation system NAS has been put into place under the impetus and aegis of the ACGME the Accreditation Committee for Graduate Medical Education the body responsible for graduate medical evaluation and oversight in the U S Among its many innovations the NAS curriculum is concerned with knowledge acquired about social and economic issues pertinent to each specialty It is also focused on improving communication skills and about enhancing quality and safety In the elaboration of milestones for residency education in these issues are codified into focused initiatives that must be addressed by each trainee as he or she advances in capability and seniority within the training

interval **Image-Based Teaching** Tara Catanzano, 2022-10-28 This book offers detailed information on a variety of teaching techniques for radiology. Generational differences in communication and adult learning theory have led to changes in educational content delivery. Traditional didactic teaching methods are no longer embraced by students requiring educators to learn and adopt new techniques. Radiologists currently in practice have little or no experience with these newer techniques, some thrust upon them abruptly by the COVID pandemic. In addition to practicing radiologists, the next generation of educators are currently in training and often do not receive instruction on educational theory and teaching techniques. It is incumbent upon members of the educational sphere to provide resources for these individuals. This work intends to provide just such a resource. The objectives of the book include: Explaining adult learning theory and brain friendly teaching; Describing teaching techniques to leverage brain friendly teaching; Reinforcing key points with links to online video based lectures as an accompaniment to the text. Topics covered across chapters include: helping non-teaching faculty to teach; writing high quality MCQ questions and teaching quality safety and professionalism. Each chapter will have one key takeaway chart at the conclusion of the chapter with high yield key points highlighted in a bulleted format. This is an ideal guide for practicing radiologists including those not currently working in academic centers. Faculty in non-academic centers can specifically benefit from chapters related to medical student, clinician and patient education. Future academic radiologists, fellows and residents can benefit from the text as a foundation for careers in teaching hospitals and academic medical centers.
