Analyse Spatiale Les Localisations Géographie:

L'analyse spatiale Denise Pumain, Thérèse Saint-Julien, 2004 L'analyse spatiale s'appuie sur un ensemble de concepts et de méthodes qui aident à penser l'aménagement de la surface de la terre par les sociétés humaines. Ce manuel s'adresse à tous ceux qui cherchent à comprendre en quoi le changement des situations géographiques exprime l'évolution des rapports des sociétés à leur espace et leurs territoires. En cours d'intégration dans les systèmes d'information géographique, les outils de l'analyse spatiale font désormais partie de la culture de base de tout géographe et plus largement de tout praticien des questions territoriales. Cet ouvrage explique les concepts et les outils spatiaux fondamentaux pour l'étude des localisations, repère et représentation des objets géographiques, description de leurs localisations, méthode d'étude de la morphologie des réseaux et de construction de régions homogènes.

Analyse spatiale de l'information géographique Régis Caloz, Claude Collet, 2011-01-01 Les systèmes d'information géographique SIG caractérisent la fois un modèle numérique de l'espace géographique mais aussi l'ensemble des outils de traitement de l'information associés. Combinant informations géographiques et statistiques, ils permettent un suivi cartographique et quantitatif des dynamiques territoriales. La plupart des collectivités publiques ont aujourd'hui achevé l'acquisition et la structuration de ce type de données. Les bases résultantes sont mises à disposition du public et des praticiens, mais la richesse et la diversité des informations qu'elles proposent rendent leur exploitation complexe. Dans la mesure où elles requièrent des connaissances développées en analyse spatiale, cet ouvrage se propose de procurer au lecteur l'ensemble des outils nécessaires à la maîtrise et à l'exploitation de ces méthodes, notamment dans le cadre de la géostatistique appliquée aux phénomènes discrets et continus. De l'analyse du relief à la formulation de requêtes spatiales, des aptitudes des réseaux, de l'accessibilité et des zones d'influence, et des objets zonaux, l'analyse multivariée associe l'aide à la décision de la dynamique spatiale ou de la propagation des incertitudes. Manuel sans équivalent couvrant l'ensemble du domaine de l'exploitation des informations spatiales et de leur analyse dans une perspective d'aide à la décision. Trois niveaux de lecture : bases, compréhension scientifique des phénomènes, méthodes opérationnelles. Nombreuses questions de révision et suggestions de lecture en fin de chaque chapitre. Clair et didactique, cet ouvrage s'adresse à un large public d'étudiants en géosciences et en sciences de l'environnement, mais aussi à des géographes et d'ingénieurs praticiens. La recherche d'un ouvrage de référence. 4e de couverture.

Universal Ontology of Geographic Space: Semantic Enrichment for Spatial Data Podobnikar, Tomaž, Čeh, Marjan, 2012-03-31 A universal approach to the ontology of geographic space has already been and is going to be a comprehensive task for establishing more effective spatial models. The concept of a universal spatial ontology should be independent of location, culture, and time. It should be fundamental and universal in the same way that the

Regional Airports M. N. Postorino, 2011 Regional Airports have become increasingly important elements of the air network system both as feeders of hub and spoke services and as origins or destination of point to point services Congestion at the main hubs and increasing demand for air transportation both for passengers and freight services necessitates revaluation of the overall air systems with regional airports taking an ever expanding role Optimisation of air transportation systems within the framework of other forms of transport plays an important part in the present quest for sustainability Congestion nowadays is not only associated with countries such as the USA and those in the EU but also a variety of other countries with fast developing economies where there is a strong increase in air transportation demand The revolution of the existing airport system including regional airports requires the developing of new optimisation tools which can simulate the whole process and produce optimal solutions These models are also essential to predict future demands and in particular the role that regional airports will play The siting of new airports involves taking into consideration a variety of environmental ecological social and economic factors which transcend the problem of transportation resources optimisation itself Regional Airports can be a powerful driving force behind the

development of an area and conversely can result in major problems if they are wrongly sited Horizons géographiques
