This book is a laboratory manual which focuses on chemical analysis, providing teachers with a rich source of novel experiments. It features approximately 60 practical activities which have been extensively beta tested and do not require access to specialist equipment. There are worked examples for students and well-developed appendices for instructors and technicians. While not aligned with any specific curriculum, the activities are drawn from content across the nations including AP Chemistry, A-level Chemistry, BTEC National Diploma, Irish Leaving Certificate, Scottish Advanced Higher, International Baccalaureate, Abitur, and Matura. It is suitable for high school, community college, and early undergraduate students and will be especially useful for those preparing for competitions such as the International Chemistry Olympiad and World Skills, as it contains more unusual applications of well-known techniques.
