Pratap Sahi,František Baluška,2018-03-01 This book discusses central concepts and theories in cell biology from the ancient
past to the 21st century based on the premise that understanding the works of scientists like Hooke Hofmeister Caspary
Strasburger Sachs Schleiden Schwann Mendel Nemec McClintock etc in the context of the latest advances in plant cell
biology will help provide valuable new insights Plants have been an object of study since the roots of the Greek Chinese and
Indian cultures Since the term cell was first coined by Robert Hooke 350 years ago in *Micrographia* the study of plant cell
biology has moved ahead at a tremendous pace The field of cell biology owes its genesis to physics which through microscopy
has been a vital source for piquing scientists interest in the biology of the cell Today with the technical advances we have
made in the field of optics it is even possible to observe life on a nanoscale From Hooke s observations of cells and his
inadvertent discovery of the cell wall we have since moved forward to engineering plants with modified cell walls Studies on
the chloroplast have also gone from Julius von Sachs experiments with chloroplast to using chloroplast engineering to deliver
higher crop yields Similarly advances in fluorescent microscopy have made it far easier to observe organelles like chloroplast
once studied by Sachs or actin observed by Bohumil Nemec If physics in the form of cell biology has been responsible for one
half of this historical development biochemistry has surely been the other *Train at Home to Work at Home* Michelle
