*Thiol-based redox homeostasis and signalling* Francisco J. Cejudo, Andreas J. Meyer, Jean-Philippe Reichheld, Nicolas Rouhier, Jose A. Traverso, 2014-09-24 In contrast to the situation in heterotrophic organisms plant genomes code for a significantly larger number of oxidoreductases such as thioredoxins TRXs and glutaredoxins GRXs These proteins provide a biochemical mechanism that allows the rapid and reversible activation or deactivation of protein functions in response to changing environmental conditions as oxidative conditions caused by excessive photosynthesis Indeed owing to the fact that cysteines are sensitive to oxidation TRXs and GRXs play an essential role in controlling the redox state of protein thiol groups These redox dependent post translational modifications have proven to be critical for many cellular functions constituting regulatory signalling or protective mechanisms The articles contained in this Research Topic provide timely overviews and new insights into thiol dependent redox regulation mechanisms with a focus on TRX and GRX based reduction systems in plants The different contexts discussed take into account physiological developmental and environmental conditions

**Ethical Artificial Intelligence from Popular to Cognitive Science** Jordan Richard Schoenherr, 2022-06-24 This book offers a unique interdisciplinary perspective on the ethics of artificial intelligence autonomous intelligent and connected systems or AIs applying principles of social cognition to understand the social and ethical issues associated with the creation adoption and implementation of AIs As humans become entangled in sociotechnical systems defined by human and artificial agents there is a pressing need to understand how trust is created used and abused Compounding the difficulty in answering these questions stakeholders directly or indirectly affected by these systems differ in their motivations understanding and values This volume provides a comprehensive resource to help stakeholders understand ethical issues of designing and implementing AIs using an ethical sensemaking approach Starting with the general technical affordances of AIS Dr Jordan Richard Schoenherr considers the features of system design relating data integrity selection and interpretation of algorithms and the evolution processes that drive AIs innovation as a sociotechnological system The poles of technophobia algorithmic aversion and technophilia algorithmic preference in the public perception of AIs are then

described and considered against existing evidence including issues ranging from the displacement and re education needs of the human workforce the impact of use of technology on interpersonal accord and surveillance and cybersecurity Ethical frameworks that provide tools for evaluating the values and outcomes of AISs are then reviewed and how they can be aligned with ethical sensemaking processes identified by psychological science is explored Finally these disparate threads are brought together in a design framework Also including sections on policies and guideline gaming and social media and Eastern philosophical frameworks this is fascinating reading for students and academics in psychology computer science philosophy and related areas as well as professionals such as policy makers and those working with AI systems **Stepping**

**Stones to Christianity** Peter S. Williams, 2025-10-17 Stepping Stones to Christianity introduces a rational case for Christianity in three steps starting with scientific arguments for design in cosmology and biology moving on to philosophical arguments for the existence of God and closing with an overview of the evidence for a Christian understanding of the historical Jesus in the context of competing contemporary worldviews By bringing together revised and expanded versions of materials written to introduce three of the author's Essays on books with Wipf Stock Stepping Stones to Christianity equips readers to consider the case for design in nature to investigate philosophical arguments for God and to wrestle with the identity of Jesus

**Current challenges in photosynthesis: From natural to artificial** Harvey J.M. Hou, Suleyman I. Allakhverdiev, Mohammad Mahdi Najafpour, Govindjee, 2014-10-03 Jules Verne 1828 1905 author of Around the World in Eighty Days 1873 and Journey to the Center of the Earth 1864 wrote in 1875 I believe that water will one day be used as a fuel because the hydrogen and oxygen which constitute it used separately or together will furnish an inexhaustible source of heat and light I therefore believe that when coal oil deposits are oxidised we will heat ourselves by means of water Water is the fuel of the future Solar energy is the only renewable energy source that has sufficient capacity for the global energy need it is the only one that can address the issues of energy crisis and global climate change A vast amount of solar energy is harvested and stored via photosynthesis in plants algae and cyanobacteria since over 3 billion years Today it is estimated that photosynthesis produces more than 100 billion tons of dry biomass annually which would be equivalent to a hundred times the weight of the total human population on our planet at the present time and equal to a global energy storage rate of about 100 TW The solar power is the most abundant source of renewable energy and oxygenic photosynthesis uses this energy to power the planet using the amazing reaction of water splitting During water splitting driven ultimately by sunlight oxygen is released into the atmosphere and this along with food production by photosynthesis supports life on our earth The other product of water oxidation is hydrogen proton and electron This hydrogen is not normally released into the atmosphere as hydrogen gas but combined with carbon dioxide to make high energy containing organic molecules When we burn fuels we combine these organic molecules with oxygen The design of new solar energy systems must adhere to the same principle as that of natural photosynthesis For us to manipulate it to our benefit it is imperative that we completely understand the

basic processes of natural photosynthesis and chemical conversion such as light harvesting excitation energy transfer electron transfer ion transport and carbon fixation Equally important we must exploit application of this knowledge to the development of fully synthetic and or hybrid devices Understanding of photosynthetic reactions is not only a satisfying intellectual pursuit but it is important for improving agricultural yields and for developing new solar technologies Today we have considerable knowledge of the working of photosynthesis and its photosystems including the water oxidation reaction Recent advances towards the understanding of the structure and the mechanism of the natural photosynthetic systems are being made at the molecular level To mimic natural photosynthesis inorganic chemists organic chemists electrochemists material scientists biochemists biophysicists and plant biologists must work together and only then significant progress in harnessing energy via artificial photosynthesis will be possible This Research Topic provides recent advances of our understanding of photosynthesis gives to our readers recent information on photosynthesis research and summarizes the characteristics of the natural system from the standpoint of what we could learn from it to produce an efficient artificial system i e from the natural to the artificial This topic is intended to include exciting breakthroughs possible limitations and open questions in the frontiers in photosynthesis research

**Science and Faith in Dialogue** Frederik van Niekerk, Nico Vorster, 2023-03-01 Science and Faith in Dialogue presents a cogent compelling case for concordance between science and theism The term theism refers in this book to the belief in God's existence Within theology the term theism is often used to convey a range of presuppositions about the nature and attributes of God Based on scientific and natural theological perspectives two pillars of natural theology are revisited the Cosmological Argument and the Argument from Design The book argues that modern science provides undeniable evidence and a scientific basis for these classical arguments to infer a rationally justifiable endorsement of theism as being concordant with reason and science nature is seen as operating orderly on comprehensible rational consistent laws in line with the conviction that God is Creator
