Development - From cognitive functions to neural underpinnings Korbinian Moeller, Elise Klein, Klaus F Willmes - von
 Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical
 abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge
 societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we
 are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very
 restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also
 informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities
 in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has
 gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross
 cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies
 develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of
 developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of
 how numerical competencies develop and how this development is associated with neural changes as well In the end this
 knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has
 grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this
 Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural
 substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included
 empirical contributions using different experimental methodologies but also theoretical contributions review articles or

Stable Lévy Processes via Lamperti-Type Representations Andreas E. Kyprianou, Juan Carlos Pardo, 2022-04-07 Stable Lévy processes lie at the intersection of Lévy processes and self similar Markov processes Processes in the latter class enjoy a Lamperti type representation as the space time path transformation of so called Markov additive processes MAPs This completely new mathematical treatment takes advantage of the fact that the underlying MAP for stable processes can be explicitly described in one dimension and semi explicitly described in higher dimensions and uses this approach to catalogue a large number of explicit results describing the path fluctuations of stable Lévy processes in one and higher dimensions Written for graduate students and researchers in the field this book systemically establishes many classical results as well as presenting many recent results appearing in the last decade including previously unpublished material Topics explored include first hitting laws for a variety of sets path conditionings law preserving path transformations the distribution of extremal points growth envelopes and winding behaviour
