The Last Best League (10th anniversary edition) Jim Collins, 2014-05-27 Every summer in ten small towns across Cape Cod young college baseball players showcase their talents in hopes of making it to the show A vicious filter the league has produced one out of every six major league players from Nomar Garciaparra and Todd Helton to Jeff Bagwell and Barry Zito In this brilliantly crafted narrative Jim Collins chronicles a season in the life of the Chatham A's perhaps the most celebrated team in the Cape Cod Baseball League Set against a seemingly bucolic backdrop a well heeled resort town on the bend of the outer Cape the story charts the changing fortunes of a handful of players all of whom battle slumps and self doubt in an effort to impress major league scouts and make the playoffs Several players go home with career threatening injuries one blue chip

prospect fulfills great expectations while another is dubbed the biggest disappointment on the Cape A pitcher hides an arm injury while negotiating a minor league contract another leaves early to tend to his dying father And nearly all look to the following year s major league draft as a barometer of their worth Far more than a baseball book The Last Best League is an engrossing story about dreams fulfilled and dreams destroyed about Cape Cod and the rites of summer about coming of age in America Residues of Some Veterinary Drugs in Animals and Foods Joint FAO/WHO Expert Committee on Food

Casanova, Mikhail Lebedev, Ioan Opris , 2018-09-14 The final volume in this tripartite series on Brain Augmentation is entitled From Clinical Applications to Ethical Issues and Futuristic Ideas Many of the articles within this volume deal with translational efforts taking the results of experiments on laboratory animals and applying them to humans In many cases these interventions are intended to help people with disabilities in such a way so as to either restore or extend brain function Traditionally therapies in brain augmentation have included electrical and pharmacological techniques In contrast some of the techniques discussed in this volume add specificity by targeting select neural populations This approach opens the door to where and how to promote the best interventions Along the way results have empowered the medical profession by expanding their understanding of brain function Articles in this volume relate novel clinical solutions for a host of neurological and psychiatric conditions such as stroke Parkinson s disease Huntington s disease epilepsy dementia Alzheimer s disease autism spectrum disorders ASD traumatic brain injury and disorders of consciousness In disease symptoms and signs denote a departure from normal function Brain augmentation has now been used to target both the core symptoms that provide specificity in the diagnosis of a disease as well as other constitutional symptoms that may greatly handicap the individual The volume provides a report on the use of repetitive transcranial magnetic stimulation rTMS in ASD with reported improvements of core deficits i e executive functions TMS in this regard departs from the present day trend towards symptomatic treatment that leaves unaltered the root cause of the condition In diseases such as schizophrenia brain augmentation approaches hold promise to avoid lengthy pharmacological interventions that are usually riddled with side effects or those with limiting returns as in the case of Parkinson s disease Brain stimulation can also be used to treat auditory verbal hallucination visuospatial hemispatial neglect and pain in patients suffering from multiple sclerosis The brain acts as a telecommunication transceiver wherein different bandwidth of frequencies brainwave oscillations transmit information Their baseline levels correlate with certain behavioral states The proper integration of brain oscillations provides for the phenomenon of binding and central coherence Brain augmentation may foster the normalization of brain oscillations in nervous system disorders These techniques hold the promise of being applied remotely under the supervision of medical

personnel thus overcoming the obstacle of travel in order to obtain healthcare At present traditional thinking would argue the possibility of synergism among different modalities of brain augmentation as a way of increasing their overall effectiveness and improving therapeutic selectivity Thinking outside of the box would also provide for the implementation of brain to brain interfaces where techniques proper to artificial intelligence could allow us to surpass the limits of natural selection or enable communications between several individual brains sharing memories or even a global brain capable of self organization Not all brains are created equal Brain stimulation studies suggest large individual variability in response that may affect overall recovery treatment or modify desired effects of a given intervention The subject's age gender hormonal levels may affect an individual's cortical excitability In addition this volume discusses the role of social interactions in the operations of augmenting technologies Finally augmenting methods could be applied to modulate consciousness even though its neural mechanisms are poorly understood Finally this volume should be taken as a debate on social moral and ethical issues on neurotechnologies Brain enhancement may transform the individual into someone or something else These techniques bypass the usual routes of accommodation to environmental exigencies that exalted our personal fortitude learning exercising and diet This will allow humans to preselect desired characteristics and realize consequent rewards without having to overcome adversity through more laborious means The concern is that humans may be playing God and the possibility of an expanding gap in social equity where brain enhancements may be selectively available to the wealthier individuals These issues are discussed by a number of articles in this volume Also discussed are the relationship between the diminishment and enhancement following the application of brain augmenting technologies the problem of mind control with BMI technologies free will the duty to use cognitive enhancers in high responsibility professions determining the population of people in need of brain enhancement informed public policy cognitive biases and the hype caused by the development of brain augmenting approaches
