Making Sense of Mathematics Teacher

Education Fou-Lai Lin, Thomas J. Cooney, 2011-06-28 This is a research based book on mathematics teacher education. It is about the learning of prospective and inservice mathematics teachers, mathematics educators and researchers. The text is intended for a broad audience including teacher educators, mathematics educators, graduate students in mathematics education and mathematics teachers at all levels of schooling. In offering an examination of teacher education programs from different societies and cultures, this book provides an international perspective on mathematics teacher education. Practical situations associated with related theories are studied critically throughout the chapters. The possibilities and constraints of making an analogy between mathematics learning theories and mathematics teachers' learning theories are argued and examined. New perspectives on mathematics teacher education are presented along with relevant examples, thus enhancing the book's readability for international readers.

BACKGROUND OF THE BOOK The book was inspired by the obvious need to address issues in mathematics teacher education. In particular, the following mission statement for the newly established Journal of Mathematics Teacher Education (JMTE) reflects the mission of this book as well. The Journal of Mathematics Teacher Education is devoted to topics and issues involving the education of teachers of mathematics at all stages of their professional development. JMTE will serve as a forum for research on teachers' learning for considering institutional, societal and cultural influences that impact the education of mathematics teachers and for creating models for teachers of mathematics.

Teaching, Tasks, and Trust John Brehm, Scott Gates, 2008-06-20 The mere word bureaucracy brings to mind images of endless lines, piles of paperwork and frustrating battles over rules and red tape. But some bureaucracies are clearly more efficient and responsive than others. Why? In *Teaching, Tasks, and Trust*, distinguished political scientists John Brehm and Scott Gates show that a good part of the answer may be found in the roles that middle managers play in teaching and supporting the front line employees who make a bureaucracy work. Brehm and Gates employ a range of sophisticated modeling and statistical methods in their analysis of employees in federal agencies, police departments and social service centers. Looking directly at what front line workers say about their supervisors, they find that employees who feel they have received adequate training have a clearer understanding of the agency's mission, which leads to improved efficiency within their departments. Quality training translates to trust: employees who feel supported and well trained for the job are more likely to trust their supervisors than those who report being subject to constant monitoring and a strict hierarchy. Managers who stand up for employees to media, government and other agency officials are particularly effective in cultivating the trust of their workers. And trust, the authors find, motivates superior job performance and commitment to the agency's mission. Employees who trust their supervisors report that they work harder, put in longer hours and are less likely to break rules. The authors extend these findings to show that once supervisors gain trust, they enjoy greater latitude in influencing how employees allocate their time while working. Brehm and Gates show how these three executive roles are

interrelated training and protection for employees gives rise to trust which provides supervisors with the leverage to stimulate improved performance among their workers This new model which frames supervisors as teachers and protectors instead of taskmasters has widespread implications for training a new generation of leaders and creating more efficient organizations Bureaucracies are notorious for inefficiency but mid level supervisors who are often regarded as powerless retain tremendous power to build a more productive workforce Teaching Tasks and Trust provides a fascinating glimpse into a bureaucratic world operating below the radar of the public eye a world we rarely see while waiting in line or filling out paperwork A Volume in the Russell Sage Foundation Series on Trust **Framework for Mathematics, Science and Technology** ,1994 *2013 International Conference on Advanced Education Technology and Management Science(AETMS2013)* S.
