

Deactivation / Reactivation

In exceptional conditions (moving a vehicle that is bogged down in mud, stuck in snow, on loose soil, etc.), it may prove useful to deactivate the DSC/ASR systems, so that the wheels can move freely and regain grip.

However, it is recommended that the system be reactivated as soon as possible.

These systems are reactivated automatically every time the ignition is switched off, or from 50 km/h (31 mph).

At speeds below 50 km/h (31 mph), the systems can be reactivated manually.

Press this button or turn the thumbwheel to this position.

The indicator lamp in the button or thumbwheel comes on: the DSC/ASR systems no longer have an effect on engine operation.

To reactivate the system:

Press this button.

Or

Turn the thumbwheel to this position.

The indicator lamp in the button or thumbwheel goes off.

Malfunction

In the event of a malfunction, this warning lamp comes on on the instrument panel, accompanied by the display of a message and an audible signal.

Have it checked by any authorized Toyota retailer or Toyota authorized repairer, or any reliable repairer.

WARNING

ASR/DSC

These systems enhance safety during normal driving, but should not encourage the driver to take extra risks or drive at high speed.

It is in conditions of reduced grip (rain, snow, ice) that the risk of loss of grip increases. It is therefore important for your safety to keep these systems activated in all conditions, and particularly in difficult conditions.

Correct operation of these systems depends on compliance with the manufacturer's recommendations relating to the wheels (tyres and rims), braking and electronic components, as well as the assembly and repair procedures provided by any authorized Toyota retailer or Toyota authorized repairer, or any reliable repairer.

In order to ensure that these systems remain effective in wintry conditions, the use of snow or all-season tyres is recommended. All four

wheels must be fitted with tyres approved for your vehicle.

All tyre specifications are listed on the tyre/point label. For more information on identification markings, refer to the corresponding section.

Trailer stability assist (TSA)

When towing, this system reduces the risk of the vehicle or trailer snaking.

Operation

The system is activated automatically when the ignition is switched on.

The electronic stability control system (VSC) must not have any faults.

The vehicle speed must be between 37 and 99 mph (60 and 160 km/h).

If the system detects that the trailer is snaking, it applies the brakes to stabilise the trailer and reduces engine power, if necessary, to slow the vehicle (indicated by the flashing of this warning lamp on the instrument panel and the brake lamps coming on). For information on weights and towed loads, refer to the **Engine technical data and towed loads** section or your vehicle's registration certificate.

To ensure safe driving with a **Towing device**, refer to the corresponding section.
