substantial number of changes in geotechnical engineering especially in the applications of foundation engineering As the
world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing
or other construction projects are now being used Such areas include problematic soil regions mining subsidence areas and
sanitary landfills To overcome the problems associated with these natural or man made soil deposits new and improved
methods of analysis design and implementation are needed in foundation construction As society develops and living
standards rise tall buildings transportation facilities and industrial complexes are increasingly being built Because of the
heavy design loads and the complicated environments the traditional design concepts construction materials methods and
