Resources in Education ,1998 Interaction Between Compilers and Computer Architectures Gyungho

Lee, Pen-Chung Yew, 2013-03-14 Effective compilers allow for a more efficient execution of application programs for a given computer architecture while well conceived architectural features can support more effective compiler optimization techniques. A well thought out strategy of trade offs between compilers and computer architectures is the key to the successful designing of highly efficient and effective computer systems. From embedded micro controllers to large scale multiprocessor systems it is important to understand the interaction between compilers and computer architectures. The goal of the Annual Workshop on Interaction between Compilers and Computer Architectures INTERACT is to promote new ideas and to present recent developments in compiler techniques and computer architectures that enhance each other's capabilities and performance. Interaction Between Compilers and Computer Architectures is an updated and revised volume consisting of seven papers originally presented at the Fifth Workshop on Interaction between Compilers and Computer Architectures INTERACT 5 which was held in conjunction with the IEEE HPCA 7 in Monterrey Mexico in 2001. This volume explores recent developments and ideas for better integration of the interaction between compilers and computer architectures in designing modern processors and computer systems. Interaction Between Compilers and Computer Architectures is suitable as a secondary text for a graduate level course and as a reference for researchers and practitioners in industry.

Deregulating Property-Liability Insurance J. David Cummins, 2004-06-23 Over the past two decades the United States has successfully deregulated prices and restrictions on most previously regulated industries including airlines, trucking, railroads, telecommunications and banking. Only a few industries remain regulated, the largest being the property liability insurance business. In light of recent sweeping financial modernization legislation in other sectors of the insurance industry, this timely volume examines the basis for continued regulation of rates and forms of the U.S. property liability insurance market. The book focuses on private passenger automobile insurance, the most important personal line of property liability coverage with annual premiums of about 120 billion. The authors analyze five state case studies: California, Massachusetts and New Jersey, three of the most heavily regulated states as well as Illinois which has been deregulated for about 30 years and South Carolina which began to deregulate in 1997. The study also includes an econometric analysis based on all fifty states over a 25 year period that gauges the impact of regulation on insurance price levels, price volatility and the proportion of automobiles insured in residual markets. The authors conclude that regulation does not significantly reduce long run prices for consumers and generally limits availability of coverage, reduces the quality and variety of services.
