Evolution of Organismal Form: From Regulatory Interactions to Developmental Processes and Biological Patterns Sylvain Marcellini, Hector Escriva, 2017-02-14 Today s biodiversity is the spectacular product of hundreds of millions of years of evolution Understanding how this diversity of living organisms appeared is one of the most intriguing and challenging question in biology Because organismal morphology is established during embryonic development and because morphological traits diversified from ancestral forms during evolution it can be inferred that changes in the mechanisms controlling embryonic development are instrumental for morphological evolution This syllogism lies at the very heart of a new discipline called Evo Devo which is centered in the identification of the cellular and genetic mechanisms that through modifications in developmental programmes were at the base of morphological innovations during evolution After the discovery of the broad conservation of gene content and regulatory networks in the animal kingdom as well as in plants Evo Devo is orienting towards the study of differences through experimental and functional approaches Given the wide range of species gene families and developmental processes considered a concerted effort is still required to shed light on the genetic cellular and molecular mechanisms involved in phenotypic evolution It is a particularly exciting time for this field of evolutionary developmental biology as the advent of novel imaging genome editing and sequencing technologies allows the study of almost any organism in ways that were unthinkable only a few years ago Therefore the aim of this Frontiers Research Topic is to gather an original collection of experimental approaches concepts and hypotheses reflecting the current diversity of the Evo Devo field We have organized the articles according to the mechanistic depth with which they tackle specific evolutionary issues Hence comparisons of expression patterns have been grouped in Chapter 1 changes in regulatory interactions and gene networks are presented in Chapter 2 while Chapter 3 focuses on the evolution of developmental processes and biological patterns **Indigenous Oral History Manual** Winona Wheeler, Charles E. On Frege Puzzles Stefan Rinner, 2025-07-30 This book argues against the received view of propositional theory according to which mental attitudes such as believing knowing hoping and wishing are relations held between agents and propositions Roughly speaking propositions are primary bearers of truth that are neither sentences nor utterances be it of a public language or of a language of thought This book argues that the propositional theory does not provide a solution to Frege s puzzle about belief which arises if we formulate disquotational principles connecting sincere assertion and belief certain standards regarding rationality and semantic principles such as the theory of direct reference within the framework of the propositional theory This suggests that we must reject the propositional theory The book emphasises this again by showing that the propositional theory cannot solve Schiffer s puzzle regarding de re belief which in addition to disquotational principles connecting sincere assertion and belief uses highly plausible exportation and rationality principles for de re belief It then discusses possible alternatives to the propositional theory such as Marcus theory of states of affairs Lewis property account Larson and Ludlow s theory of interpreted logical forms and Moltmann s Multiple Relation Theory Just like the propositional theory these theories maintain that mental attitudes such as believing are relations and they also inherit the main problems of the propositional theory Therefore the author proposes and develops a non relational account of the attitudes in question that together with a measurement account of the respective attitude ascriptions provides a solution to both Frege s puzzle and Schiffer s puzzle On Frege Puzzles will appeal to scholars and graduate students working in philosophy of language philosophy of mind and logic
