Ljungqvist,2020-04-20 During the last decades improved sensor and hardware technologies as well as new methods and algorithms have made self driving vehicles a realistic possibility in the near future At the same time there has been a growing demand within the transportation sector to increase efficiency and to reduce the environmental impact related to transportation of people and goods Therefore many leading automotive and technology companies have turned their attention towards developing advanced driver assistance systems and self driving vehicles Autonomous vehicles are expected to have their first big impact in closed environments such as mines harbors loading and offloading sites In such areas the legal requirements are less restrictive and the surrounding environment is more controlled and predictable compared to urban areas Expected positive outcomes include increased productivity and safety reduced emissions and the possibility to relieve the human from performing complex or dangerous tasks Within these sites tractor trailer vehicles are frequently used for transportation These vehicles are composed of several interconnected vehicle segments and are therefore large complex and unstable while reversing This thesis addresses the problem of designing efficient motion planning and feedback control techniques for such systems The contributions of this thesis are within the area of motion planning and feedback control for long tractor trailer combinations operating at low speeds in closed and unstructured environments It includes development of motion planning and feedback control frameworks structured design tools for guaranteeing closed loop stability and experimental validation of the proposed solutions through simulations lab and field experiments Even though the primary application in this work is tractor trailer vehicles many of the proposed approaches can with some adjustments also be used

for other systems such as drones and ships The developed sampling based motion planning algorithms are based upon the probabilistic closed loop rapidly exploring random tree CL RRT algorithm and the deterministic lattice based motion planning algorithm It is also proposed to use numerical optimal control offline for precomputing libraries of optimized maneuvers as well as during online planning in the form of a warm started optimization step To follow the motion plan several predictive path following control approaches are proposed with different computational complexity and performance Common for these approaches are that they use a path following error model of the vehicle for future predictions and are tailored to operate in series with a motion planner that computes feasible paths The design strategies for the path following approaches include linear quadratic LQ control and several advanced model predictive control MPC techniques to account for physical and sensing limitations To strengthen the practical value of the developed techniques several of the proposed approaches have been implemented and successfully demonstrated in field experiments on a full scale test platform To estimate the vehicle states needed for control a novel nonlinear observer is evaluated on the full scale test vehicle It is designed to only utilize information from sensors that are mounted on the tractor making the system independent of any sensor mounted on the trailer Under de senaste årtiondena har utvecklingen av sensor och hrdvaruteknik gått i en snabb takt samtidigt som nya metoder och algoritmer har introducerats Samtidigt ställs det stora krav på transportsektorn att öka effektiviteten och minska miljöpåverkan vid transporter av både människor och varor Som en följd av detta har många ledande fordonstillverkare och teknikföretag börjat satsa på att utveckla avancerade färdstyre-system och självkörande fordon Vår forskning inom autonoma fordon har under de senaste årtiondena kraftigt ökat då en rad tekniska problem förstärks att lösas För att förstå fordonets första stora genombrott i slutna miljöer såsom gruvor hamnar lastnings och lossningsplatser I sådana områden är lagstiftningen mindre hård jämfört med stadsområden och omgivningen är mer kontrollerad och förutsägbar Några av de förväntade positiva effekterna är ökad produktivitet och säkerhet minskade utsläpp och möjligheten att avlasta människor från att utföra svåra eller farliga uppgifter Inom dessa platser används ofta lastbilar med olika släpvagnskombinationer för att transportera material En sådan fordonskombination är uppbyggd av flera ihopkopplade moduler och är således utmanande att backa då systemet är instabilt Detta gör det svårt att utforma ramverk för att styra sådana system vid exempelvis autonom backning Självkörande fordon är mycket komplexa system som består av en rad olika komponenter vilka är designade för att lösa separata delproblem Två viktiga komponenter i ett självkörande fordon är dels rälseplaneraren som har i uppgift att planera hur fordonet ska röra sig för att på ett säkert sätt nå ett förordnat mål och dels den banföljande regulatorn vars uppgift är att se till att den planerade manövern faktiskt utförs i praktiken trots störningar och modellfel I denna avhandling presenteras flera olika algoritmer för att planera och utföra komplexa manövrar för lastbilar med olika typer av släpvagnskombinationer De presenterade algoritmerna är avsedda att användas som avancerade färdstyre-system eller som komponenter i ett helt autonomt system Vår områdesprimära applikationen i denna avhandling är lastbilar med släpkan många av de förslagna algoritmerna kan även användas för en rad andra

system s som dr nare och b tar Experimentell validering r viktigt f r att motivera att en f reslagen algoritm r anv ndbar i praktiken I denna avhandling har flera av de f reslagna planerings och reglerstrategierna implementerats p en sm skalig testplattform och utv rderats i en kontrollerad labbmilj Ut ver detta har ven flera av de f reslagna ramverken implementerats och utv rderats i f ltexperiment p en fullskalig test plattform som har utvecklats i samarbete med Scania CV H r utv rderas ven en ny metod f r att skatta sl pvagnens beteende genom att endast utnyttja information fr n sensorer monterade p lastbilen vilket g r det f reslagna ramverket oberoende av sensorer monterade p sl pvagnen

CFD Applications in Nuclear Engineering Wenxi Tian, Victor Petrov, Yixiang Liao, Mingjun Wang, Nejdett Erkan, 2023-08-21 High fidelity nuclear reactor thermal hydraulic simulations are a hot research topic in the development of nuclear engineering technology The three dimensional Computational Fluid Dynamics CFD and Computational Multi phase Fluid Dynamics CMFD methods have attracted significant attention in predicting single phase and multi phase flows under steady state or transient scenarios in the field of nuclear reactor engineering Compared with three dimensional thermal hydraulic methods the traditional one dimensional system analysis method contains inherent defects in the required accuracy and spatial resolution for a number of important nuclear reactor thermal hydraulic phenomena At present the CFD method has been widely adopted in the nuclear industry across both light water reactors and liquid metal cooled fast reactors providing an effective solution for complex issues of thermal hydraulic analysis However the CFD method employs empirical models for turbulence simulation heat transfer multi phase interaction and chemical reactions Such models must be validated before they can be used with confidence in nuclear reactor applications In addition user practice guidelines play a critical role in

achieving reliable results from CFD simulations Intelligence and Safety for Humanoid Robots: Design, Control, and Applications Zhihong Tian,Zhaoquan Gu,Yanhua Li,Wei Shi,Keke Tang,Zheng Wang,2022-02-07 *Soil Analysis: Recent Trends and Applications* Amitava Rakshit,Subhadip Ghosh,Somsubhra Chakraborty,Varughese Philip,Avishek Datta,2020-04-07 Soil analysis is critically important in the management of soil based production systems In the absence of efficient methods of soil analysis our understanding of soil is pure guesswork Ideally the pro active use of laboratory analysis leads to more sustainable soil productivity Unfortunately most of the world s agriculture is still reactionary waiting for obvious yield declines to occur before taking action to identify the reasons The modern soil laboratory is pivotal to informing soil managers what adaptive practices are needed to address chemical and physical imbalances before they occur and the intelligent adaptive use of laboratory data not only greatly speeds up and reduces the cost of empirical soil study but can even render it unnecessary This book provides a synopsis of the analytical procedures used for soil analysis discussing the common physical chemical and biological analytical methods used in agriculture and horticulture Written by experienced experts from institutions and laboratories around the globe it provides insights for a range of users including those with limited laboratory facilities and helps students teachers soil scientists and laboratory technicians increase their knowledge and skills and select appropriate methods for soil analysis *Theory and Applications of Dynamic Games* Elena Parilina,Puduru Viswanadha Reddy,Georges Zaccour,2022-11-23 This textbook provides a comprehensive overview of noncooperative and cooperative dynamic games involving uncertain parameter values with the stochastic process being described by an event tree Primarily intended for graduate students of economics management science and engineering the book is self contained as it defines and illustrates all relevant concepts originally introduced in static games before extending them to a dynamic framework It subsequently addresses the sustainability of cooperative contracts over time and introduces a range of mechanisms to help avoid such agreements breaking down before reaching maturity To illustrate the concepts discussed the book provides various examples of how dynamic games played over event trees can be applied to environmental economics management science and engineering *The Urban Ecologies of Divided Cities* Amira Osman,John Nagle,Sabyasachi Tripathi,2023-06-12 The book discusses how division affect the fabric of cities and people s sense of identity and agency and are reflected in physical features architecture and urban planning The question of divided cities represents a complex and multistranded urban Ecology at once both social and spatial it cannot be limited to a single science or discipline such as social or spatial fields This suggests integrated and cross disciplinary understandings as well as integrated or parallel approaches and solutions Urban ecologies of division manifest in multiple forms One of their most palpable expressions is conflict with parallels around the world and often with correlations in the spatial fabric Violence in such contexts is often a surface expression of deeper socio economic or ideological differences Whether as a result of intervention by authority or by dissent between groups a divided city inevitably becomes a place of conflict in various forms

and intensity eroding the joy of living and sense of collective belonging to the detriment of all In effect it erodes the collective advantage of being part of a more unified society A city exists in collections of social structures which mutually form a society A divided city implies divided social structures and in consequence a divided society The papers compiled in this book present many case studies of divided cities discussing the different causes of divisions and their effects on societies Some of the causes can be linked to conflicts wars colonialism or legislative political systems In response to the serious challenges resulting from these divisions the book aims to provide opportunities for new approaches and possibilities for new interventions and solutions making it significant to urban planners architects and policymakers
