Group 1: Earth-Sun Interactions

Question 1: How is Earth's geomagnetic field generated? How does it vary? What happens when it is disrupted? How does it affect Earth's atmosphere and space environment? How does it affect Earth's climate?

Answer 1: The Earth's magnetic field is generated by the motion of molten iron in the outer core. The field is not uniform, but it is generally aligned with the Earth's axis. The field is disrupted by the solar wind, which is a stream of charged particles from the Sun. The solar wind can cause the Earth's magnetic field to become distorted, which can lead to magnetic storms. These storms can affect the Earth's atmosphere and space environment, and they can also affect the Earth's climate.
