Designing for Human Presence in Space Paul O. Wieland,1994 *Chemical Engineering* Tanase Gh. Dobre,José G. Sanchez Marcano,2007-06-18

A description of the use of computer aided modeling and simulation in the development integration and optimization of industrial processes The two authors elucidate the entire procedure step by step from basic mathematical modeling to result interpretation and full scale process performance analysis They further demonstrate similitude comparisons of experimental results from different systems as a tool for broadening the applicability of the calculation methods Throughout the book adopts a very practical approach addressing actual problems and projects likely to be encountered by the reader as well as fundamentals and solution strategies for complex problems It is thus equally useful for student and professional engineers and chemists involved in industrial process and production plant design construction or upgrading *Chemical Process Design, Simulation and Optimization* Jean-Pierre Corriou,Jean-Claude Assaf,2021-02-19 The book presents a series of articles devoted to modeling simulation and optimization of processes mainly chemical General methods for process modeling and numerical simulation are described with flowsheeting Population balances are addressed in detail with application to crystal production energy saving is frequently optimized including exergy analysis The coupling between process simulation and computational fluid dynamics is studied for air classification and bubble columns Pressure swing adsorption reactive distillation and nanofiltration are explained in general and applied to particular processes The synthesis of carbon dots is solved by the design of experiments method A safety study addresses the consequences of gas explosion

Separation and Purification Technologies in Biorefineries Shri Ramaswamy,Hua-Jiang Huang,Bandaru V. Ramarao,2013-02-04 Separation and purification processes play a critical role in biorefineries and their optimal selection design and operation to maximise product yields and improve overall process efficiency Separations and purifications are necessary for upstream processes as well as in maximising and improving product recovery in downstream processes These processes account for a significant fraction of the total capital and operating costs and also are highly energy intensive Consequently a better understanding of separation and purification processes current and possible alternative and novel advanced methods is essential for achieving the overall techno economic feasibility and commercial success of sustainable biorefineries This book presents a comprehensive overview focused specifically on the present state future challenges and opportunities for separation and purification methods and technologies in biorefineries Topics covered include Equilibrium Separations Distillation liquid liquid extraction and supercritical fluid extraction Affinity Based Separations Adsorption ion exchange and simulated moving bed technologies Membrane Based Separations Microfiltration ultrafiltration and diafiltration nanofiltration membrane pervaporation and membrane distillation Solid liquid Separations Conventional filtration and solid

liquid extraction Hybrid Integrated Reaction Separation Systems Membrane bioreactors extractive fermentation reactive distillation and reactive absorption For each of these processes the fundamental principles and design aspects are presented followed by a detailed discussion and specific examples of applications in biorefineries Each chapter also considers the market needs industrial challenges future opportunities and economic importance of the separation and purification methods The book concludes with a series of detailed case studies including cellulosic bioethanol production extraction of algae oil from microalgae and production of biopolymers Separation and Purification Technologies in Biorefineries is an essential resource for scientists and engineers as well as researchers and academics working in the broader conventional and emerging bio based products industry including biomaterials biochemicals biofuels and bioenergy
