Anthony Verboom, 2014 South Africa s fynbos region has intrigued biologists for centuries It has achieved iconic status as a locus of megadiversity and therefore a place to study the ecological underpinnings of massive evolutionary radiations Researchers have made great advances over the past two decades in unravelling the complexities of fynbos ecology and evolution and the region has contributed significant insights into the adaptive radiations of large lineages conservation science pollination biology invasive plant biology and palaeoanthropology Lessons from the fynbos offer much of value for understanding the origin maintenance and conservation of diversity anywhere in the world This book provides the first synthesis of the field for 20 years bringing together the latest ecological and evolutionary research on the South African global biodiversity hotspots of the Greater Cape Floristic Region the iconic fynbos and succulent karoo It explores the historical and modern physical and biological environment of this region the circumstances and processes which have fostered its remarkable biodiversity and the role this diversity has played in the emergence of modern humans It also discusses the challenges of contemporary management and conservation of the region s biodiversity in the face of accelerating global change **South Africa Survey**, 2009

Ecosystem-Based Fisheries Management Jason Link, 2010-10-07 Responsible fisheries management is of increasing interest to the scientific community resource managers policy makers stakeholders and the general public Focusing solely on managing one species of fish stock at a time has become less of a viable option in addressing the problem Incorporating more holistic considerations into fisheries management by addressing the trade offs among the range of issues involved such as ecological principles legal mandates and the interests of stakeholders will hopefully challenge and shift the perception that doing ecosystem based fisheries management is unfeasible Demonstrating that EBFM is in fact feasible will have widespread

impact both in US and international waters Using case studies underlying philosophies and analytical approaches this book brings together a range of interdisciplinary topics surrounding EBFM and considers these simultaneously with an aim to provide tools for successful implementation and to further the debate on EBFM ultimately hoping to foster enhanced living marine resource management **The American Naturalist** ,2009 **Encyclopedia of the Sciences of Learning**

Norbert M. Seel,2011-10-05 Over the past century educational psychologists and researchers have posited many theories to explain how individuals learn i e how they acquire organize and deploy knowledge and skills The 20th century can be considered the century of psychology on learning and related fields of interest such as motivation cognition metacognition etc and it is fascinating to see the various mainstreams of learning remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology Beyond folk psychology and its na ve theories of learning psychological learning theories can be grouped into some basic categories such as behaviorist learning theories connectionist learning theories cognitive learning theories constructivist learning theories and social learning theories Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines such as philosophy and epistemology education information science biology and as a result of the emergence of computer technologies especially also in the field of computer sciences and artificial intelligence As a consequence machine learning struck a chord in the 1980s and became an important field of the learning sciences in general As the learning sciences became more specialized and complex the various fields of interest were widely spread and separated from each other as a consequence even presently there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely The Encyclopedia of the Sciences of Learning provides an up to date broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields including relevant areas of instruction pedagogy cognitive sciences and especially machine learning and knowledge engineering This modern compendium will be an indispensable source of information for scientists educators engineers and technical staff active in all fields of learning More specifically the Encyclopedia provides fast access to the most relevant theoretical terms provides up to date broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies supplies clear and precise explanations of the theoretical terms cross references to related entries and up to date references to important research and publications The Encyclopedia also contains biographical entries of individuals who have substantially contributed to the sciences of learning the entries are written by a distinguished panel of researchers in the various fields of the learning sciences **Biology of Oysters** Brian Leicester Bayne,2017-05-12 Biology of Oysters offers scientific insights into the structure and function of oysters Written by an expert in the field of shellfish research this book presents more than 50 years of empirical research literature It provides an understanding of the edible oysters in order to equip students and

Archaeological Human Remains Barra O'Donnabhain, María Cecilia Lozada, 2014-06-10 This volume addresses the directions that studies of archaeological human remains have taken in a number of different countries where attitudes range from widespread support to prohibition Overlooked in many previous publications this diversity in attitudes is examined through a variety of lenses including academic origins national identities supporting institutions archaeological context and globalization The volume situates this diversity of attitudes by examining past and current tendencies in studies of archaeologically retrieved human remains across a range of geopolitical settings In a context where methodological approaches have been increasingly standardized in recent decades the volume poses the question if this standardization has led to a convergence in approaches to archaeological human remains or if significant differences remain between practitioners in different countries The volume also explores the future trajectories of the study of skeletal remains in the different jurisdictions under scrutiny **The Big Issue, Cape Town** ,2007 *Nuclear Science Abstracts* ,1961

Restoring Natural Capital James Aronson, Suzanne J. Milton, James N. Blignaut, 2012-09-26 How can environmental degradation be stopped How can it be reversed And how can the damage already done be repaired The authors of this volume argue that a two pronged approach is needed reducing demand for ecosystem goods and services and better management of them coupled with an increase in supply through environmental restoration Restoring Natural Capital brings together economists and ecologists theoreticians practitioners policy makers and scientists from the developed and developing worlds to consider the costs and benefits of repairing ecosystem goods and services in natural and socioecological systems It examines the business and practice of restoring natural capital and seeks to establish common ground between economists and ecologists with respect to the restoration of degraded ecosystems and landscapes and the still broader task of restoring natural capital The book focuses on developing strategies that can achieve the best outcomes in the shortest amount of time as it considers conceptual and theoretical issues from both an economic and ecological perspective examines specific strategies to foster the restoration of natural capital and offers a synthesis and a vision of the way forward Nineteen case studies from around the world illustrate challenges and achievements in setting targets refining approaches to finding and implementing restoration projects and using restoration of natural capital as an economic opportunity Throughout contributors make the case that the restoration of natural capital requires close collaboration among scientists from across disciplines as well as local people and when successfully executed represents a practical realistic and essential tool for achieving lasting sustainable development **Toxicology Research Projects Directory** ,1976 An indexed directory of

current research project abstracts in toxicology and related fields *Insights and Innovations in Structural Engineering, Mechanics and Computation* Alphose Zingoni, 2016-11-25 *Insights and Innovations in Structural Engineering Mechanics and Computation* comprises 360 papers that were presented at the Sixth International Conference on Structural Engineering Mechanics and Computation SEMC 2016 Cape Town South Africa 5-7 September 2016. Rebounding Marine Mammal Species and Conservation Recovery Challenges Andrea Bogomolni, Kristina Cammen, Jennifer Jackman, 2025-03-19 Marine mammals have been valued for millennia for their cultural significance and more often their exploitative resource value. Many large whale species remain imperilled or are only recently returning from the brink of extinction. In contrast, recent conservation measures have allowed for the successful rebound and recovery of many cetaceans and pinniped species, some to the point of perceived overabundance, whether referring to 1,200 Hawaiian monk seals or 7 million harp seals. In addition to their continued intrinsic value alive and thriving today, we also appreciate the value of marine mammal species to ecosystem health. Yet as we grapple with a lack of historical baselines and uncertain ecological and social carrying capacities, several conflicts are emerging at the growing interface between humans and marine mammals. These conflicts include ship strikes, depredation, bycatch, impacts of ecotourism, competition for resources, changing cultural values, and political challenges to marine mammal conservation. Despite the emergence of theory and application of human dimensions of wildlife in the terrestrial realm, the rebound of marine mammals and how we address these conflicts in the coastal and ocean environment are often overlooked when discussing human wildlife conflict issues and solutions. This Research Topic aims to increase awareness of these issues, to advance the discussion on how we can address these challenges in ocean systems. Conflicts with rebounding populations of marine mammals have emerged across diverse ecological, sociological, economic, and political contexts. Conflicts often arise from assessing how marine mammals fit into the human world based on the baseline understanding of one's own personal experiences or specific community contexts rather than broader and complex ecosystems understanding or historical context. How do we address these emerging complex socio-ecological problems related to marine mammals? Who defines the problems and how are the problems defined? How do we consider often opposing values and interests in the development of solutions and how do we engage diverse stakeholders in decision-making processes that shape how we will manage and coexist with marine mammal populations for generations to come? How can different disciplines help build the knowledge foundation and strategies necessary to address these challenges?
