Artificial Intelligence Law Edward Swan, 2024-03-18 It is inevitable given the enormous media driven concern generated by the recent application of artificial intelligence AI to an ever expanding spectrum of day to day human experience that the need for a clearly articulated legal response has become imperative This book both clarifies the controversial issues surrounding the use of AI and explores in great detail how far from being unregulated the creation distribution and operation of AI systems currently is and will remain subject to a vast array of existing laws and regulations all over the world Demonstrating beyond any doubt that the traditional concepts of legal responsibility including duty of care negligence and compensation for damages will always be applicable to those humans who create and or use artificially intelligent things or systems the author shows how AI systems are clearly implicated in numerous existing legal regimes including the following relevant provisions under international law and EU law applicable provisions in the laws of the United States the United Kingdom France China India Japan South Korea and Singapore and numerous national provisions in the legal fields of health and safety intellectual property competition privacy and data protection and military engagement However given the lack of international consensus on this vitally important issue the author suggests that any worldwide agreement on the legal responsibilities relating to the use of AI will need to be carefully defined and that provisions will need to be reviewed to determine how they will apply to any new range of artificially intelligent creations The purpose of this book is to review those legal concepts throughout the world that currently govern the application of AI and to comment on modifications or extensions of the rule of law that are being proposed as necessary to serve and protect humanity in relation to the expanding applications of AI It is important that anyone who uses or is affected by AI products understands the relationship between existing laws and regulations in major markets around the world and those areas where initial regulations may be required For them for their counsel and for the various policy and regulatory authorities confronted with AI issues this book will prove an essential guide

Until somewhat recently AI was mostly an academic pursuit that always seemed far away from being released outside of academia Today however AI is touching almost every aspect of human life As such there are several emerging legal and policy questions that society will need to reckon with Although we are faced with new challenges we have many opportunities to utilize true and tested frameworks and legal infrastructure that has been centuries in the making This book tries to bring together two disparate fields law and technology and give the reader an understanding of their convergence and divergence We start to answer many of these questions or at least open the discussion that acknowledges its complexity This is an exploration of those questions and where possible we try to go over information that might be helpful in appreciating the depth of those questions As technology and law are two large subjects that span a wide range we do our best to narrow the scope of the chapters as best we can This book should not be taken as original research in that we hypothesize how the legal system should change or what the answers to these questions are We instead look at the underlying logic that is provided within current legal frameworks to see how they can be adapted to fit current AI and future generations of much more powerful AI Just as this is an emerging field we are emerging researchers interested in starting to put pen to paper on the

kind of questions we will spend our lifetimes pursuing In the last chapter we ask AI to make some forward looking projections about how it sees AI and law intersecting in the future In summary this book is not intended to convey original research or ideas about how AI and the law should interact in the future It is not formal academic research but rather thoughts ideas and frameworks that two students wanted to compile based on classwork across Stanford and externally Advanced Introduction to Law and Artificial Intelligence Woodrow Barfield,Ugo Pagallo,2020-10-30 Woodrow Barfield and Ugo Pagallo present a succinct introduction to the legal issues related to the design and use of artificial intelligence AI Exploring human rights constitutional law data protection criminal law tort law and intellectual property law they consider the laws of a number of jurisdictions including the US the European Union Japan and China making reference to case law and statutes
