On the Theory of the Reflection and Refraction of Light Hendrik Antoon Lorentz, 1997 1997 the centennial year of the electron provides a good occasion to publish the first English translation ever made of H A Lorentz s doctoral dissertation of 1875 Just 22 years old Lorentz took up and handled magisterially one major unresolved problem of Maxwell s electromagnetic theory the reflection and refraction of light By then the superiority of Maxwell s electromagnetic ether theory over current elastic solid conceptions such as Fresnel s was not nearly a settled issue In his dissertation Lorentz strove with considerable success to make it that Still he found that neither theory allowed for a satisfactory account of dispersion One intriguing aspect of Lorentz s earliest scientific achievement which within two years was to earn him the chair of theoretical physics at Leyden University is that a range of subjects soon to occupy him for the rest of his life are already clearly foreshadowed in it So far Lorentz s first step in science has existed only in the original Dutch and in a French translation made long ago as part of the Collected Works Here the joint translators have striven to provide a fluently readable full text while preserving the flavor of Lorentz original language and style
