Air Conditioning and Refrigeration Engineering Frank Kreith, Shan K. Wang, Paul Norton, 2018-04-20 An air conditioning system consists of components and equipment arranged in sequential order to control and maintain an indoor environment. The goal is to provide a healthy and comfortable climate with acceptable air quality while being energy efficient and cost effective. Air Conditioning and Refrigeration Engineering covers all types of systems from institutional and commercial to residential. The book supplies the basics of design from selecting the optimum system and equipment to preparing the drawings and specifications. It discusses the four phases of preparing a project: gathering information, developing alternatives, evaluating alternatives, and selling the best solution. In addition, the author breaks down the responsibilities of the engineer, design documents, computer aided design, and government codes and standards. Air Conditioning and Refrigeration Engineering provides you with an easy reference to all aspects of the topic. This resource addresses the most current areas of interest such as computer aided design and drafting, desiccant air conditioning, and energy conservation. It is a thorough and convenient guide to air conditioning and refrigeration engineering.

Additionally, the load calculation program has been revised and updated. These computer programs are available at the book's website: www.wiley.com/college/mcquiston. Key Features of the Sixth Edition: Additional new worked examples in the text and on the accompanying software. Chapters 6-9 have been extensively revised for clarity and ease of use. Chapter 8, The Cooling Load, now includes two approaches: the heat balance method as recommended by ASHRAE and the simpler RTS method. Both approaches include computer applications to aid in calculations. Provides complete authoritative treatment of all aspects of HVAC based on current ASHRAE standards.
