The Foundations of Laboratory Safety Stephen R. Rayburn, 2012-12-06 Safety is a word that has many connotations of risk of a possible accident that is acceptable conjuring up different meanings to different people to one person may not be acceptable to another What is safety A scientist views safety differently This may be one reason why skydiving as a consideration in the design of an experiment and mountain climbing are sports that are not different A manufacturing plant engineer looks at safety as popular as are say boating or skiing on safety as one of the necessary factors in But even activities that have high levels of developing a manufacturing process A legal potential risk can be engaged in safely How labor is likely to see safety as an important part can we minimize risks so that they decrease of an environmental law A governmental act to acceptable levels We can do this by identifying administrator may consider various safety issues identifying sources of hazards and by assessing the when reviewing the environmental consequences risks of accidents inherent to these hazards consequences of a proposed project An attorney Most hazards that are faced in the laboratory may base a negligence suit on safety defects
