$\frac{1}{2} \times \frac{3}{4} = \frac{1 \times 3}{2 \times 4} = \frac{3}{8}$
 $\frac{2}{3} \div \frac{4}{5} = \frac{2}{3} \times \frac{5}{4} = \frac{10}{12} = \frac{5}{6}$
 $\frac{3}{4} + \frac{1}{2} = \frac{3}{4} + \frac{2}{4} = \frac{5}{4} = 1\frac{1}{4}$
 $\frac{1}{2} - \frac{1}{3} = \frac{3}{6} - \frac{2}{6} = \frac{1}{6}$

1 m	= 100 cm or 1000 mm
1 cm	= 10 mm
1 litre	= 1000 ml or 1000 cm ³
1 tonne	= 1000 kg
1 kg	= 1000 g

Rules of Indices

$2^3 \times 2^5 = 2^{(3+5)} = 2^8$
 $7^4 \div 7^2 = 7^{(4-2)} = 7^2$
 $(2^3)^2 = 2^{(3 \times 2)} = 2^6$
 2^{-1} = the reciprocal of 2 (i.e. $\frac{1}{2}$)

Multiples of 12 are: 12, 24, 36, 48...
 Factors of 12 are: 1, 2, 3, 4, 6, 12
 Prime numbers are: 2, 3, 5, 7, 11, 13...
 Square numbers are: 1, 4, 9, 16, 25...
 Triangle numbers are: 1, 3, 6, 10...
 Cube numbers are: 1, 8, 27, 64...

Calculate fraction of quantity

To find $\frac{3}{4}$ of a quantity $\Rightarrow 5 \times 4$

e.g. $\frac{3}{4}$ of £20 = $20 \div 4 \times 3 = £15$

Equations

- Multiply out brackets first
- If there are letters on both sides get rid of the smaller first
- Do the same to both sides

Example:

To solve $5(x-3) = 3x+7$ (expand brackets)
 $5x-15 = 3x+7$ (x from both sides)
 $2x-15 = 7$ (x on both sides)
 $2x = 22$ (+15 to both sides)
 $x = 11$

Inequalities

Standard Form

$2.34 \times 10^4 = 23,400$
 $1.7 \times 10^{-3} = 0.0017$

Order of Calculation

Order	Calculation	Order
1	$2+4$	1
2	2×4	2
3	2^2	3
4	2^3	4
5	$2 \times 2 \times 2$	5
6	$2 \times 2 \times 2$	6
7	$2 \times 2 \times 2$	7
8	$2 \times 2 \times 2$	8
9	$2 \times 2 \times 2$	9
10	$2 \times 2 \times 2$	10

Ratio

e.g. Divide £240 between A and B in ratio of 3:5

$A = 3$
 $B = 5$
 One share = $£240 \div 8 = £30$
 A = 3 shares = $3 \times £30 = £90$
 B = 5 shares = $5 \times £30 = £150$

Simplifying expressions

$3x + 4y - 7 + 2y = 3x + 6y - 7$
 $5p^2 - 2p + p^2 = 6p^2 - 2p$

Expanding brackets

Multiply everything inside the bracket by what is outside. Then collect like terms together.

$3(x+2) = 3x+6$
 $2(x-5) = 2x-10$
 $5(x-3) = 5x-15$

Watch for the negative sign in front of the bracket. It changes the sign inside the bracket.

$3(x+2) - 2(x-5)$
 $= 3x+6-2x+10$
 $= x+16$

Factorise

$3x + 6 = 3(x+2)$
 $6x^2 - 8x = 2x(3-2)$

Expanding Double brackets

$(x+3)(x+4) = x^2 + 7x + 12$

Method:

Sequences

If the 1st difference is constant, it is linear

e.g. 3, 7, 11, 15, 19, 23...

+4 +4 +4 +4 +4

The term to term rule is $+4$

nth term = $4n - 1$

The nth term can be used to find the term in any position

e.g. 10th term means $n=10$

10th term = $4 \times 10 - 1 = 39$

Visualisation and Epistemological Access to Mathematics Education in Southern Africa Marc Schäfer, 2023-04-27 This book demonstrates that using visualisation processes in mathematics education can help to enhance teaching and learning and bridge the inequality gap that exists between well resourced and under resourced schools in Southern Africa Drawing on classroom research conducted in the Southern African region it examines how epistemological access in a context of gross inequality can be constructively addressed by providing research based solutions and recommendations The book outlines the visualisation process as an integral but often overlooked process of mathematics teaching and learning It goes beyond the traditional understanding of visualisation processes such as picture forming and using tools and considers visualisation processes that are semiotic in nature and includes actions such as gestures in combination with language It adds value to the visualisation in mathematics education research discourse and deliberation in Africa With a unique focus on Southern Africa and open avenues for further research and collaboration in the region it will be a highly relevant reading for researchers academics and post graduate students of mathematics education comparative education and social justice education GED Test 5-Hour Quick Prep For Dummies Tim Collins, 2024-02-06 Get familiar with the GED Test in just 5 hours of study time GED Test 5 Hour Quick Prep For Dummies is for those who want a fast test prep option that will help calm test day jitters You ll get a basic overview of the GED and its structure some sample questions and a short form practice test with answers and explanations Everything you need and nothing you don t And it s all broken down for you into short timed study blocks that you can tackle all at once or over several days It couldn t be easier to brush up your knowledge and familiarize yourself with the exam ahead of test day With this Dummies 5 Hour Quick Prep guide you re well on your way to getting that GED under your belt Get a basic summary of what you need to know to take the GED test Take a short set of practice questions for each section of the exam plus one practice test Find tips for going into test day refreshed confident and ready Study smart with efficient study blocks that will help you prepare quickly If you don t want or don t have time for a long form study guide you ll love this fast focused approach to prepping for the GED Test *The Mathematics of the Uncertain* Eduardo Gil, Eva Gil, Juan Gil, María Ángeles Gil, 2018-02-28 This book is a tribute to Professor Pedro Gil who created the Department of Statistics OR and TM at the University of Oviedo and a former President of the Spanish Society of Statistics and OR SEIO In more than eighty original contributions it illustrates the extent to which Mathematics can help manage uncertainty a factor that is inherent to real life Today it goes without saying that in order to model experiments and systems and to analyze related outcomes and data it is necessary to consider formal ideas and develop scientific approaches and techniques for dealing with uncertainty Mathematics is crucial in this endeavor as this book demonstrates As Professor Pedro Gil highlighted twenty years ago there are several well known mathematical branches for this purpose including Mathematics of chance Probability and Statistics Mathematics of communication Information Theory and Mathematics of imprecision Fuzzy

Sets Theory and others These branches often intertwine since different sources of uncertainty can coexist and they are not exhaustive While most of the papers presented here address the three aforementioned fields some hail from other Mathematical disciplines such as Operations Research others in turn put the spotlight on real world studies and applications The intended audience of this book is mainly statisticians mathematicians and computer scientists but practitioners in these areas will certainly also find the book a very interesting read Extreme Value Theory with Applications to Natural Hazards Nicolas Bousquet,Pietro Bernardara,2021-10-09 This richly illustrated book describes statistical extreme value theory for the quantification of natural hazards such as strong winds floods and rainfall and discusses an interdisciplinary approach to allow the theoretical methods to be applied The approach consists of a number of steps data selection and correction non stationary theory to account for trends due to climate change and selecting appropriate estimation techniques based on both decision theoretic features e g Bayesian theory empirical robustness and a valid treatment of uncertainties It also examines and critically reviews alternative approaches based on stochastic and dynamic numerical models as well as recently emerging data analysis issues and presents large scale multidisciplinary state of the art case studies Intended for all those with a basic knowledge of statistical methods interested in the quantification of natural hazards the book is also a valuable resource for engineers conducting risk analyses in collaboration with scientists from other fields such as hydrologists meteorologists climatologists **Logics in Artificial Intelligence** Wolfgang Faber,Gerhard Friedrich,Martin Gebser,Michael Morak,2021-05-12 This book constitutes the proceedings of the 17th European Conference on Logics in Artificial Intelligence JELIA 2021 held as a virtual event in May 2021 The 27 full papers and 3 short papers included in this volume were carefully reviewed and selected from 68 submissions The accepted papers span a number of areas within Logics in AI including argumentation belief revision reasoning about actions causality and change constraint satisfaction description logics and ontological reasoning non classical logics and logic programming answer set programming *Improving Primary Mathematics Education, Teaching and Learning* Mellony Graven,Hamsa Venkat,2017-01-19 This book focuses on how to improve the teaching and learning of primary level mathematics education within resource constrained contexts It builds on two large numeracy projects within South Africa which speak to broader global concerns and highlight how research and development not only enables one to meet ethical imperatives but also explore how further interventions can be developed Teacher and research communities must work together to create mutually beneficial relationships and establish a cohesive understanding of the requirements of primary mathematics education EPPP Step One Exam Review Anne L. Linguistic Influences on Mathematical Cognition Ann Dowker, Hans-Christoph Nuerk, 2017-06-16 For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about

linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing

Helping Children Learn Mathematics, 5th Australian Edition Robert Reys, Mary Lindquist, Diana V. Lambdin, Nancy L. Smith, Anna Rogers, Leicha Bragg, Audrey Cooke, Melissa Fanshawe, Mark Gronow, 2025-10-10 *Engaging Families as Children's First Mathematics Educators* Sivan Phillipson, Ann Gervasoni, Peter Sullivan, 2016-11-21 This book explores how professionals can engage and inspire parents to support their young children's mathematics learning Bringing together international experts researchers and scholars it proposes a framework for engaging with and supporting parents including those who are less aware of the crucial development of children's mathematical skills in the early years Focusing on mathematics learning from birth to 5 years the book's underlying assumption is that it is possible to offer guidance to professionals working with families with young children concerning how to engage and support families in the area of mathematics learning including those families who seem alienated from education services Specifically the respective chapters present a framework for understanding children's early mathematical development and the important role of families in this regard They describe effective strategies for engaging families in their children's mathematics learning including those who are marginalised and experience multiple disadvantages so that all families can best support their children's mathematical learning and their development of positive attitudes towards learning In closing hurdles and opportunities within the systems surrounding family engagement are addressed **Novel Mathematics Inspired by**

Industrial Challenges Michael Günther, Wil Schilders, 2022-03-30 This contributed volume convenes a rich selection of works with a focus on innovative mathematical methods with applications in real world industrial problems Studies included in this book are all motivated by a relevant industrial challenge and demonstrate that mathematics for industry can be extremely rewarding leading to new mathematical methods and sometimes even to entirely new fields within mathematics The book is organized into two parts Computational Sciences and Engineering and Data Analysis and Finance In every chapter readers will find a brief description of why such work fits into this volume an explanation on which industrial challenges have been instrumental for their inspiration and which methods have been developed as a result All these contribute to a greater unity of the text benefiting not only practitioners and professionals seeking information on novel

Stem, steam, computational thinking and coding: Evidence-based research and practice in children's development Stamatios Papadakis, Michail Kalogiannakis, Ali Ibrahim Can Gözümlü, 2023-03-13 Arguing with Numbers James Wynn, G. Mitchell Reyes, 2021-04-15 As discrete fields of inquiry rhetoric and mathematics have long been considered antithetical to each other That is if mathematics explains or describes the phenomena it studies with certainty persuasion is not needed This volume calls into question the view that mathematics is free of rhetoric Through nine studies of the intersections between these two disciplines Arguing with Numbers shows that mathematics is in fact deeply rhetorical Using rhetoric as a lens to analyze mathematically based arguments in public policy political and economic theory and even literature the essays in this volume reveal how mathematics influences the values and beliefs with which we assess the world and make decisions and how our worldviews influence the kinds of mathematical instruments we construct and accept In addition contributors examine how concepts of rhetoric such as analogy and visuality have been employed in mathematical and scientific reasoning including in the theorems of mathematical physicists and the geometrical diagramming of natural scientists Challenging academic orthodoxy these scholars reject a math equals truth reduction in favor of a more constructivist theory of mathematics as dynamic evolving and powerfully persuasive By bringing these disparate lines of inquiry into conversation with one another Arguing with Numbers provides inspiration to students established scholars and anyone inside or outside rhetorical studies who might be interested in exploring the intersections between the two disciplines In addition to the
