Synergies of Soft Computing and Statistics for Intelligent Data Analysis Rudolf Kruse, Michael R. Berthold, Christian Moewes, María Ángeles Gil, Przemysław Grzegorzewski, Olgierd Hryniewicz, 2012-09-13 In recent years there has been a growing interest to extend classical methods for data analysis The aim is to allow a more flexible modeling of phenomena such as uncertainty imprecision or ignorance Such extensions of classical probability theory and statistics are useful in many real life situations since uncertainties in data are not only present in the form of randomness various types of incomplete or subjective information have to be handled About twelve years ago the idea of strengthening the dialogue between the various research communities in the field of data analysis was born and resulted in the International Conference Series on Soft Methods in Probability and Statistics SMPS This book gathers contributions presented at the SMPS 2012 held in Konstanz Germany Its aim is to present recent results illustrating new trends in intelligent data analysis It gives a comprehensive overview of current research into the fusion of soft computing methods with probability and statistics Synergies of both fields might improve intelligent data analysis methods in terms of robustness to noise and applicability to larger datasets while being able to efficiently obtain understandable solutions of real world problems

Metal Forming Analysis R. H. Wagoner, J.-L. Chenot, 2001-05-07 The introduction of numerical methods particularly finite element FE analysis represents a significant advance in metal forming operations Numerical methods are used increasingly to optimize product design and deal with problems in metal forging rolling and extrusion processes Metal Forming Analysis first published in 2001 describes the most important numerical techniques for simulating metal forming operations The first part of the book describes principles and procedures and includes numerous examples and worked problems The remaining chapters focus on applications of numerical analysis to specific forming operations Most of these results are drawn from the authors research in the areas of metal testing sheet metal forming forging extrusion and similar operations Sufficient information is presented so that readers can understand the nonlinear finite element method as applied to forming problems without a prior background in structural finite element analysis Graduate students researchers and practising engineers will
