Drug Delivery to the Brain Elizabeth C.M. de Lange, Margareta Hammarlund-Udenaes, Robert G. Thorne, 2022-05-24 The development of new CNS drugs is notoriously difficult Drugs must reach CNS target sites for action and these sites are protected by a number of barriers the most important being the blood brain barrier BBB Many factors are therefore critical to consider for CNS drug delivery e.g active passive transport across the BBB intra brain distribution and central systemic pharmacokinetics to name a few Neurological disease and trauma conditions add further complexity because CNS barriers drug distribution and pharmacokinetics are dynamic and often changed by disease trauma Knowledge of all these factors and their interplay in

different conditions is of utmost importance for proper CNS drug development and disease treatment. In recent years much information has become available for a better understanding of the many factors important for CNS drug delivery and how they interact to affect drug action. This book describes small and large drug delivery to the brain with an emphasis on the physiology of the BBB and the principles and concepts for drug delivery across the BBB and distribution within the brain. It contains methods descriptions for studying drug delivery routes and approaches of administering drugs into the brain, the influence of disease, drug industry perspectives and a primer on neuroanatomy and physiological considerations written specifically for drug delivery scientists. Therewith it contributes to an in depth understanding of the interplay between brain patho physiology and drug characteristics. Furthermore the content is designed to be both cutting edge and educational so that the book can be used in high level training of academic and industry scientists with full references to original publications.
