Advances in Natural Language Processing, Intelligent Informatics and Smart Technology Thanaruk Theeramunkong, Rachada Kongkachandra, Thepchai Supnithi, 2018-03-15 This book constitutes the thoroughly refereed proceedings of the Eleventh International Symposium on Natural Language Processing SNLP 2016 held in Phranakhon Si Ayutthaya Thailand on February 10 12 2016 The SNLP promotes research in natural language processing and related fields and provides a unique opportunity for researchers professionals and practitioners to discuss various current and advanced issues of interest in NLP The 2016 symposium was expanded to include the First Workshop in Intelligent Informatics and Smart Technology Of the 66 high quality papers accepted this book presents twelve from the Symposium on Natural Language Processing track and ten from the Workshop in Intelligent Informatics and Smart Technology track SSAI Special Session on Artificial Intelligence Neuroanatomy for the XXIst Century Kathleen S. Rockland, Javier DeFelipe, 2016-08-15 An explosion of new techniques with vastly improved visualization and sensitivity is leading a veritable revolution in modern neuroanatomy Basic questions related to cell types input localization and connectivity are being re visited and tackled with significantly more accurate and higher resolution experimental approaches A major goal of this e Book is thus to highlight in one place the impressive range of available techniques even as these are fast becoming routine This is not meant as a technical review however but rather will project the technical explosion as indicative of a field now in a vibrant state of renewal Thus contributions will be mainly research articles using the newer techniques A second goal is to showcase what has become the conspicuous interdisciplinary reach of the field neuroanatomical standards and the close association of structure function and underlying circuitry mechanisms are increasingly relevant to investigations in development physiology and disease Another feature of this Research Topic is that it includes a breadth of cross species contributions from investigators working with rodent nonhuman primate and human brains This is important since most of our current knowledge of brain structure has been obtained from experimental animals However recent technical advances coupled with researcher willingness to use the human tissue available will undoubtedly lead to major advances in the near future regarding human brain mapping and connectomes Thus of particular interest will be the methods that can help to define general wiring principles in the brain both structural and functional Overall the state of the field is exciting

Neuroanatomy of Human Brain Development Hao Huang, Julia P. Owen, Pratik Mukherjee, 2017-03-07 The human brain is extraordinary complex and yet its origin is a simple tubular structure Rapid and dramatic structural growth takes place during the fetal and perinatal period By the time of birth a repertoire of major cortical subcortical and white matter structures resembling the adult pattern has emerged however there are continued maturational changes of the gray matter and white matter throughout childhood and adolescence and into adulthood The maturation of neuronal structures provides the neuroanatomical basis for the acquisition and refinement of cognitive functions during postnatal development

Histological imaging has been traditionally dominant in understanding neuroanatomy of early brain development and still plays an unparalleled role in this field Modern magnetic resonance imaging MRI techniques including diffusion MRI as noninvasive tools readily applied to in vivo brains have become an important complementary approach in revealing the detailed brain anatomy including the structural connectivity between brain regions In this research topic we presented the most recent investigations on understanding the neuroanatomy and connectivity of human brain development using both histology and MRI Modern advances in mapping normal developmental brain anatomy and connectivity should elucidate many neurodevelopmental disorders ranging from rare congenital malformations to common disorders such as autism and attention deficit hyperactivity disorder ADHD which is a prerequisite for better diagnosis and treatment of these currently poorly understood diseases
