This book is written for medical and other allied health students. It seeks to aid students in gaining a general understanding of clinical anatomy before embarking on a specific discipline focused program. Organized among two sections, the first includes chapters that cover the anatomy of the head and neck, abdomen, thorax, pelvis, and perineum, lower limb, upper limb, and back. What's more, section two briefly examines the embryology and development of the organ systems such as the development of major organs. This title is an invaluable resource for students who wish to retain anatomical knowledge on the entire human body despite an eventual career in one particular discipline of medicine. It is complemented by its previously published sister text, Medical Neuroanatomy for the Boards and the Clinic, which applies similar principles of anatomical information with a focus on identifying potentially malignant lesions. Anatomy Carmine D. Clemente, 1997. This fourth edition of Clemente's classic Anatomy is revised, expanded, and more user friendly. The atlas includes 135 new figures as well as several hundred redrawn illustrations from the Sobotta collection distributed among the following parts of the atlas: Pectoral Region and Upper Limb, The Thorax, The Abdomen, The Pelvis and Perineum, The Lower Limb, The Back, Vertebral Column and Spinal Cord, and The Head and Neck. New indices of sequential figures for each section serve as excellent study guides to every region of the body. The notes have been revised, and new leader lines added to the figures. The entire layout of the atlas is focused toward quick retrieval of information required by the student or professional. Plus, Clemente has added valuable muscle charts to make this an indispensable learning resource for students of medicine, dentistry, and the allied health fields. **Practical Human Anatomy** Faneuil Dunkin Weiss, 1886.
