Transgenics in Dispute Cristiano Luis Lenzi,2023-01-01 This book analyses the conflict over the release of transgenic soybean in Brazil based on a narrative analysis of political conflict At the end of the 1990s the commercial release of Roundup Ready RR soybean triggered a heated debate over the introduction of genetically modified organisms GMOs in Brazilian agriculture which developed into an open political conflict opposing pro and anti GMOs groups in Brazilian society This volume examines some of the structuring axes of this conflict by applying a narrative analysis of political conflict In this approach politics is perceived as a process of interpretive conflict in which participants in the political game seek to establish the lines that delimit the very definition of public issues under debate The issue of GMOs is understood from this perspective as a public controversy whose dynamics are shaped by the discourses that emerge from the dispute itself To analyze these controversies the book focuses on three

A Pluralist Theory of the Mind David Ludwig, 2015-10-22 This book challenges common debates in philosophy of mind by questioning the framework of placement problems in contemporary metaphysics The author argues that placement problems arise when exactly one fundamental ontology serves as the base for all entities and will propose a pluralist alternative that takes the diversity of our conceptual resources and ontologies seriously This general pluralist account is applied to issues in philosophy of mind to argue that contemporary debates about the mind body problem are built on this problematic framework of placement problems The starting point is the plurality of ontologies in scientific practice Not only can we describe the world in terms of physical biological or psychological ontologies but any serious engagement with scientific ontologies will identify more specific ontologies in each domain For example there is not one unified ontology for biology but rather a diversity of scientific specializations with

different ontological needs Based on this account of scientific practice the author argues that there is no reason to assume that ontological unification must be possible everywhere Without this ideal the scope of ontological unification turns out to be an open empirical question and there is no need to present unification failures as philosophically puzzling placement problems
