Moreover, it explores pivotal areas such as numerical analysis and methods, as well as fostering interdisciplinary mathematical research initiatives. Building upon the legacy of its predecessors, IACMC 2023 served as a premier platform for scholars, researchers, and industry professionals to converge and exchange insights on a myriad of cutting-edge advancements and practical applications within the realm of mathematical sciences. This volume encapsulates the essence of IACMC 2023, offering readers a comprehensive overview of the latest breakthroughs and trends in mathematical sciences while serving as a testament to the collaborative spirit and intellectual vigor that define this esteemed conference series.

Algebraic Geometry: Salt Lake City 2015 Tommaso de Fernex, Brendan Hassett, Mircea Mustață, Martin Olsson, Mihnea Popa, Richard Thomas, 2018-06-01 This is Part 1 of a two-volume set. Since Oscar Zariski organized a meeting in 1954, there has been a major algebraic geometry meeting every decade: Woods Hole 1964, Arcata 1974, Bowdoin 1985, Santa Cruz 1995, and Seattle 2005. The American Mathematical Society has supported these summer institutes for over 50 years. Their proceedings volumes have been extremely influential, summarizing the state of algebraic geometry at the time and pointing to future developments. The most recent Summer Institute in Algebraic Geometry was held July 2015 at the University of Utah in Salt Lake City, sponsored by the AMS with the collaboration of the Clay Mathematics Institute. This volume includes surveys growing out of plenary lectures and seminar talks during the meeting. Some present a broad overview of their topics, while others develop a distinctive perspective on an emerging topic. Topics span both complex algebraic geometry and arithmetic questions: specifically, analytic techniques, enumerative geometry, moduli theory, derived categories, birational geometry, tropical geometry, Diophantine questions, geometric representation theory, characteristic and adic tools, etc. The resulting articles will be important references in these areas for years to come.

Vertex Operator Algebras, Number Theory and Related Topics Matthew Krauel, Michael Tuite, Gaywalee Yamskulna, 2020-07-13 This volume contains the proceedings of the International Conference on Vertex Operator Algebras, Number Theory and Related Topics, held from June 11-15, 2018, at California State University, Sacramento, California. The mathematics of vertex operator algebras, vector-valued modular forms, and finite group theory continues to provide a rich and vibrant landscape in mathematics and physics. The resurgence of moonshine related to the Mathieu group and other groups, the increasing role of algebraic geometry, and the development of irrational vertex operator algebras are

just a few of the exciting and active areas at present The proceedings center around active research on vertex operator algebras and vector valued modular forms and offer original contributions to the areas of vertex algebras and number theory surveys on some of the most important topics relevant to these fields introductions to new fields related to these and open problems from some of the leaders in these areas

Perfectoid Spaces Bhargav Bhatt, Ana Caraiani, Kiran S. Kedlaya, Peter Scholze, Jared Weinstein, 2022-02-04 Introduced by Peter Scholze in 2011 perfectoid spaces are a bridge between geometry in characteristic 0 and characteristic p and have been used to solve many important problems including cases of the weight monodromy conjecture and the association of Galois representations to torsion classes in cohomology In recognition of the transformative impact perfectoid spaces have had on the field of arithmetic geometry Scholze was awarded a Fields Medal in 2018 This book originating from a series of lectures given at the 2017 Arizona Winter School on perfectoid spaces provides a broad introduction to the subject After an introduction with insight into the history and future of the subject by Peter Scholze Jared Weinstein gives a user friendly and utilitarian account of the theory of adic spaces Kiran Kedlaya further develops the foundational material studies vector bundles on Fargues Fontaine curves and introduces diamonds and shtukas over them with a view toward the local Langlands correspondence Bhargav Bhatt explains the application of perfectoid spaces to comparison isomorphisms in p adic Hodge theory Finally Ana Caraiani explains the application of perfectoid spaces to the construction of Galois representations associated to torsion classes in the cohomology of locally symmetric spaces for the general linear group This book will be an invaluable asset for any graduate student or researcher interested in the theory of perfectoid spaces and their applications

Morrey Spaces David Adams, 2015-12-31 In this set of lecture notes the author includes some of the latest research on the theory of Morrey Spaces associated with Harmonic Analysis There are three main claims concerning these spaces that are covered determining the integrability classes of the trace of Riesz potentials of an arbitrary Morrey function determining the dimensions of singular sets of weak solutions of PDE e g The Meyers Elcart System and determining whether there are any full interpolation results for linear operators between Morrey spaces This book will serve as a useful reference to graduate students and researchers interested in Potential Theory Harmonic Analysis PDE and or Morrey Space Theory

Surveys on Recent Developments in Algebraic Geometry Izzet Coskun, Tommaso de Fernex, Angela Gibney, 2017-07-12 The algebraic geometry community has a tradition of running a summer research institute every ten years During these influential meetings a large number of mathematicians from around the world convene to overview the developments of the past decade and to outline the most fundamental and far reaching problems for the next The meeting is preceded by a Bootcamp aimed at graduate students and young researchers This volume collects ten surveys that grew out of the Bootcamp held July 6 10 2015 at University of Utah Salt Lake City Utah These papers give succinct and thorough introductions to some of the most important and exciting developments in algebraic geometry in the last decade Included are descriptions of the striking advances in the Minimal Model Program moduli spaces derived categories
