Analyse Spatiale Les Localisations Géographie:

L'analyse spatiale Denise Pumain, Thérèse Saint-Julien, 2004 L'analyse spatiale s'appuie sur un ensemble de concepts et de méthodes qui aident à penser l'aménagement de la surface de la terre par les sociétés humaines. Ce manuel s'adresse à tous ceux qui cherchent à comprendre en quoi le changement des situations géographiques exprime l'évolution des rapports des sociétés à leur espace et leurs territoires. En cours d'intégration dans les systèmes d'information géographique, les outils de l'analyse spatiale font désormais partie de la culture de base de tout géographe et plus largement de tout praticien des questions territoriales. Cet ouvrage explique les concepts et les outils spatiaux fondamentaux pour l'étude des localisations, repère et représentation des objets géographiques, description de leurs localisations, méthode d'étude de la morphologie des réseaux et de construction de régions homogènes.

Analyse spatiale de l'information géographique Régis Caloz, Claude Collet, 2011-01-01 Les systèmes d'information géographique SIG caractérisent la fois un modèle numérique de l'espace géographique mais aussi l'ensemble des outils de traitement de l'information associés. Combinant informations géographiques et statistiques, ils permettent un suivi cartographique et quantitatif des dynamiques territoriales. La plupart des collectivités publiques ont aujourd'hui achevé l'acquisition et la structuration de ce type de données. Les bases résultantes sont mises à disposition du public et des praticiens, mais la richesse et la diversité des informations qu'elles proposent rendent leur exploitation complexe. Dans la mesure où elles requièrent des connaissances développées en analyse spatiale, cet ouvrage se propose de procurer au lecteur l'ensemble des outils nécessaires à la maîtrise et à l'exploitation de ces méthodes, notamment dans le cadre de la géostatistique appliquée aux phénomènes discrets et continus. De l'analyse du relief à la formulation de requêtes spatiales, des aptitudes des réseaux, de l'accessibilité et des zones d'influence, et des objets zonaux, l'analyse multivariée associe l'aide à la décision de la dynamique spatiale ou de la propagation des incertitudes. Manuel sans équivalent couvrant l'ensemble du domaine de l'exploitation des informations spatiales et de leur analyse dans une perspective d'aide à la décision. Trois niveaux de lecture : bases, compréhension scientifique des phénomènes, méthodes opérationnelles. Nombreuses questions de révision et suggestions de lecture en fin de chaque chapitre. Clair et didactique, cet ouvrage s'adresse à un large public d'étudiants en géosciences et en sciences de l'environnement, mais aussi à des géographes et d'ingénieurs praticiens. La recherche d'un ouvrage de référence. 4e de couverture.

Universal Ontology of Geographic Space: Semantic Enrichment for Spatial Data Podobnikar, Tomaž, Čeh, Marjan, 2012-03-31 A universal approach to the ontology of geographic space has already been and is going to be a comprehensive task for establishing more effective spatial models. The concept of a universal spatial ontology should be independent of location, culture, and time. It should be fundamental and universal in the same way that the number

Le carroyage des informations urbaines Gilles Lajoie, 1992

Depuis quelques années, la gestion de l'espace urbain est informatisée dans les grandes agglomérations, mais la dimension environnementale est très souvent occultée. Difficultés méthodologiques, Antagonisme. Ce livre ouvre une piste encore inexplorée en France : la gestion de la ville dans toutes ses dimensions : sociale, économique, environnementale, etc. Grâce à une banque de données par carroyage Testée sur la région rouennaise, cette méthodologie présente les espaces urbains et périurbains en 10 000 cases de 250 mètres de côté. Plusieurs dizaines de variables constituent ainsi une véritable banque de données par carroyage.

La géographie - 3e éd. Jean-Jacques Bavoux, 2016-03-02

On n'a jamais autant parlé de géographie. Mais si elle a beaucoup à dire sur la mondialisation, l'aménagement des territoires, les changements climatiques, l'emprise du cyberspace, l'explosion de la mobilité ou les tensions internationales, elle reste cependant une science moins connue. Cet ouvrage vient combler ce manque. En montrant la richesse des approches géographiques et le dynamisme de leurs tendances les plus actuelles, cette nouvelle édition entièrement remaniée et enrichie présente l'ensemble des méthodes bouleversées par les évolutions de la cartographie géomatique, SIG, télédétection, l'essor de l'informatique, la géographie webmapping, globes virtuels et la prise en compte nouvelle des représentations et comportements spatiaux. Elle s'interroge sur les objectifs de la géographie et son utilité dans la société, tout en approfondissant la manière dont elle est enseignée et ses rapports avec la politique, l'écologie, l'économie ou la culture. Un manuel à l'attention de tous les étudiants en géographie, des enseignants qui s'interrogent sur les métamorphoses de leur discipline et de tous ceux qui dans leur vie professionnelle ou leur vie tout court ont rapport avec les dimensions spatiales et territoriales.

Regional Airports M. N.

Postorino, 2011 Regional Airports have become increasingly important elements of the air network system both as feeders of hub and spoke services and as origins or destination of point to point services Congestion at the main hubs and increasing demand for air transportation both for passengers and freight services necessitates revaluation of the overall air systems with regional airports taking an ever expanding role Optimisation of air transportation systems within the framework of other forms of transport plays an important part in the present quest for sustainability Congestion nowadays is not only associated with countries such as the USA and those in the EU but also a variety of other countries with fast developing economies where there is a strong increase in air transportation demand The revolution of the existing airport system including regional airports requires the developing of new optimisation tools which can simulate the whole process and produce optimal solutions These models are also essential to predict future demands and in particular the role that regional airports will play The siting of new airports involves taking into consideration a variety of environmental ecological social and economic factors which transcend the problem of transportation resources optimisation itself Regional Airports can be a powerful driving force behind the development of an area and conversely can result in major problems if they are wrongly sited

Horizons géographiques Mark Bassin, Georges Benko, 2004 La 4e de couv indique La géographie n'est pas un long fleuve tranquille Les auteurs de cet ouvrage qui comptent parmi les scientifiques les plus reconnus à l'échelle internationale nous racontent comment la pensée s'est construite dans chacun des champs majeurs de la géographie humaine Issus des mondes francophones et anglophones ils nous montrent que les horizons géographiques sont multiples et que ceux-ci communiquent Ce livre traite de l'histoire récente et de l'épistémologie de la géographie Refusant de réduire la géographie à l'une de ses écoles ils portent un regard réflexif diversifié sur une discipline qui s'assume aujourd'hui comme science sociale et revendique la pluralité de ses approches Par la mise en perspective qu'il opère cet ouvrage permet de mieux comprendre les débats et les enjeux actuels de la géographie Il constitue ainsi une introduction à la géographie et ses mutations récentes

L'Espace géographique, 1987 *Handbook on the Geographies of Innovation* Richard Shearmur, Christophe Carrincazeaux, David Doloreux, 2016-11-25 The geography of innovation is changing Firstly it is increasingly understood that innovative firms and organizations exhibit a wide variety of strategies each differently attuned to diverse geographic contexts Secondly and concomitantly the idea that cities clusters and physical proximity are essential for innovation is evolving under the weight of new theorizing and empirical evidence The aim of this handbook is to break with the many ideas and concepts that emerged during the course of the 1980s and 1990s and to fully take into account the new reality of the internet mobile communication technologies personal mobility and globalization The handbook gathers a new generation of ideas and authors to contribute to the debate providing an empirically grounded critical appraisal of the prevailing knowledge on the geography of innovation The 28 original chapters written by a diverse range of scholars with widely differing views present fresh empirical evidence and new perspectives relating to how innovation plays out across space in an age where mobility has increased

information is ubiquitous and globalisation has been realised Overall the dialogue between existing theory and new possibilities provides a unique and challenging appraisal of the connection between innovation agglomeration and space Offering cutting edge ideas in an accessible format this will be an ideal resource for students and scholars of economic geography and innovation studies The empirical evidence and analysis will also be of great value for policymakers and government officials Contributors include B T Asheim H W Aslesen A Bain P A Balland N Bradford A Bramwell C Brennan Horley S Breschi C Carraincazeaux C Chaminade R Comunian C De Fuentes D Doloreux D Eckert A Faggian M Ferru R D Fitjar K Flanagan C Gibson M Grillitsch M Grossetti G Harirchi F Huber A Isaksen S Jewel J Karlsen N Komninos J L Klein N Lee F Lissoni M Maisonobe J Mattes P McCann C T Noumedem R Ortega Argil s M Plechero A Rallet A Rodriguez Pose R Shearmur H L Smith B Spigel J Tallec E Tranos D G Tremblay F T dtling M Trippl E Uyarra C Yang C Wilkie D A Wolfe
