Hoffecker, 2017-10-31 Modern Humans is a vivid account of the most recent and perhaps the most important phase of human evolution the appearance of anatomically modern people Homo sapiens in Africa less than half a million years ago and their later spread throughout the world Leaving no stone unturned John F Hoffecker demonstrates that Homo sapiens represents a major transition in the evolution of living systems in terms of fundamental changes in the role of non genetic information Modern Humans synthesizes recent findings from genetics including the rapidly growing body of ancient DNA the human fossil record and archaeology relating to the African origin and global dispersal of anatomically modern people Hoffecker places humans in the broad context of the evolution of life emphasizing the critical role of genetic and non genetic forms of information in living systems as well as how changes in the storage transmission and translation of information underlie major transitions in evolution He also draws on information and complexity theory to explain the emergence of Homo sapiens in Africa several hundred thousand years ago and the rapid and unprecedented spread of our species into a variety of environments in Australia and Eurasia including the Arctic and Beringia beginning between 75 000 and 60 000 years ago This magisterial work will appeal to all with an interest in the ever fascinating field of human evolution

Decoding the Hand Alison Bashford, 2025-12-23 The astonishing history of palmistry and biometrics from occult physicians to the very foundations of modern science and medicine Why did Isaac Newton read books on chiromancy the occult science of hand reading that revealed the secrets of the soul Why did Charles Darwin claim that the hand gave humans dominion over all other species Why did psychoanalyst Charlotte Wolff climb into the primate cages of the London Zoo taking hundreds of delicate palm prints Why did Francis Galton the father of fingerprinting take palm prints too And why did world leading geneticists study the geometry of palm lines in their search for the secrets of chromosomal syndromes Decoding the Hand is an astounding history of magic medicine and science of an enduring search for how our bodily surfaces might reveal an inner self a soul a character an identity From sixteenth century occult physicians influenced by the Kabbalah to twentieth century geneticists and from criminologists to eugenicists award winning historian Alison Bashford takes us on a remarkable journey into the strange world of hand readers revealing how signs on the hand its shape lines marks and patterns have been elaborately decoded over the centuries Sometimes learned sometimes outrageously deceptive sometimes earnest and more often than we ever expected medically and scientifically trained these

Human Hand Function Lynette A. Jones, Susan J. Lederman, 2006-04-20 *Human Hand Function* is a multidisciplinary book that reviews the sensory and motor aspects of normal hand function from both neurophysiological and behavioral perspectives Lynette Jones and Susan Lederman present hand function as a continuum ranging from activities that are essentially sensory in nature to those that have a strong motor component They delineate four categories of function along this sensorimotor continuum tactile sensing active haptic sensing prehension and non prehensile skilled movements that they use as a framework for analyzing and synthesizing the results from a broad range of studies that have contributed to our understanding of how the normal human hand functions The book begins with a historical overview of research on the hand and a discussion of the hand's evolutionary development in terms of anatomical structure The subsequent chapters review the research in each of the four categories along the continuum covering topics such as the intensive spatial temporal and thermal sensitivity of the hand the role of hand movements in recognizing common objects the control of reaching and grasping movements and the organization of keyboard skills Jones and Lederman also examine how sensory and motor function develops in the hand from birth to old age and how the nature of the end effector e.g a single finger or the whole hand that is used to interact with the environment influences the types of information obtained and the tasks performed The book closes with an assessment of how basic research on the hand has contributed to an array of more applied domains including communication systems for the blind haptic interfaces used in teleoperation and virtual environment applications tests used to assess hand impairments and haptic exploration in art *Human Hand Function* will be a valuable resource for student and professional researchers in neuroscience cognitive psychology engineering human technology interaction and physiology
