

Interior of the Sun

The Sun

- The Sun is a sphere, composed almost entirely of the elements hydrogen and helium.
- The Sun is not solid, nor is it a typical gas.
 - It does not have a defined outer boundary.
 - It does have a definite internal structure with identifiable layers.
 - Most atoms in the Sun exist as **plasma**.
- Fourth state of matter made up of superheated gas with a positive electrical charge.

Study Tip

How would scientists use cameras to observe different layers of the Sun? Hint: Different temperatures are associated with different wavelengths on the electromagnetic spectrum!

Internal Structure

From inward to outward, the layers of the Sun are:

- **Central Core**
 - Plasma with a temperature is around 27 million °C.
 - At high temperatures hydrogen goes through **nuclear** fusion, which forms helium.
 - This energy moves outward, towards outer layers of the Sun.
- **Radiative Zone**
 - Temperature of about 7 million °C.
 - Energy from core travels extremely slowly through here.
 - **Photons** (particles of light) travel only a little before they hit another particle.
 - The photon is absorbed and then released again.
- **Convection Zone**
 - Hot material from near the radiative zone rises, cools at the Sun's surface, and plunges back downward to the radiative zone.
 - Convective movement helps to create solar flares and sunspots.

The Outer Layers

There are no solid layers to any part of the Sun's atmosphere; these boundaries are fuzzy and indistinct.

applications must also consider some of the very fundamental challenges including but not limited to sedimentation entrainment stability and life of these potential energy materials Additionally there are novel applications of newly developed specialized materials in solar energy capture transport and storage This topic is to circumscribe all challenges innovative applications and numerical studies in materials for energy capture transfer and storage to have a safe future in terms of solar energy utilization *Covid-19 and diabetes, volume II*, 2023-04-17 **Coronavirus Disease (COVID-19):**

Kalergis, Longxiang Su, Abdallah Samy, Zhongheng Zhang, 2023-04-25 Volume I B An outbreak of a respiratory disease first

reported in Wuhan China in December 2019 and the causative agent was discovered in January 2020 to be a novel

betacoronavirus of the same subgenus as SARS CoV and named severe acute respiratory syndrome coronavirus 2 SARS CoV

2 Coronavirus disease 2019 COVID 19 has rapidly disseminated worldwide with clinical manifestations ranging from mild

respiratory symptoms to severe pneumonia and a fatality rate estimated around 2% Person to person transmission is

occurring both in the community and healthcare settings The World Health Organization WHO has recently declared the

COVID 19 epidemic a public health emergency of international concern The ongoing outbreak presents many clinical and

public health management challenges due to limited understanding of viral pathogenesis risk factors for infection natural

history of disease including clinical presentation and outcomes prognostic factors for severe illness period of infectivity

modes and extent of virus inter human transmission as well as effective preventive measures and public health response and

containment interventions There are no antiviral treatment nor vaccine available but fast track research and development

efforts including clinical therapeutic trials are ongoing across the world Managing this serious epidemic requires the

appropriate deployment of limited human resources across all cadres of health care and public health staff including clinical

laboratory managerial and epidemiological data analysis and risk assessment experts It presents challenges around public

communication and messaging around risk with the potential for misinformation and disinformation Therefore integrated

operational research and intervention learning from experiences across different fields and settings should contribute

towards better understanding and managing COVID 19 This Research Topic aims to highlight interdisciplinary research

approaches deployed during the COVID 19 epidemic addressing knowledge gaps and generating evidence for its improved

management and control It will incorporate critical theoretically informed and empirically grounded original research

contributions using diverse approaches experimental observational and intervention studies conceptual framing expert

opinions and reviews from across the world The Research Topic proposes a multi dimensional approach to improving the

management of COVID 19 with scientific contributions from all areas of virology immunology clinical microbiology
