Landslide Analysis and Early Warning Systems Benni Thiebes, 2012-01-21 Recent landslide events demonstrate the need to improve landslide forecasting and early warning capabilities in order to reduce related risks and protect human lives In this thesis local and regional investigations were carried out to analyse landslide characteristics in the Swabian Alb region and to develop prototypic landslide early warning systems In the local study area an extensive hydrological and slope movement monitoring system was installed on a seasonally reactivated landslide body located in Lichtenstein Unterhausen Monitoring data was analysed to assess the influence of rainfall and snow melt on groundwater conditions and the initiation of slope movements The coupled hydrology slope stability model CHASM was applied to detect areas most prone to slope failures and to simulate slope stability using a variety of input data Subsequently CHASM was refined and two web based applications were developed a technical early warning system to constantly simulate slope stability integrating rainfall measurements hydrological monitoring data and weather forecasts and a decision support system allowing for quick calculation of stability for freely selectable slope profiles On the regional scale available landslide inventory data were analysed for their use in evaluation of rainfall thresholds proposed in other studies Adequate landslide events were selected and their triggering rainfall and snow melting conditions were compared to intensity duration and cumulative thresholds Based on the results a regional landslide early warning system was developed and implemented as a webbased application Both the local and the regional landslide early warning systems are part of a holistic and integrative early warning chain developed by the ILEWS project and could easily be transferred to other landslide prone areas *Proceedings of the 14th International Conference on Computer Engineering and Networks* Guangqiang Yin, Xiaodong Liu, Jian Su, Yangzhao Yang, 2025-05-07 This conference proceedings is a collection of papers accepted for CENet2024 the 14th International Conference on Computer Engineering and Networks held in Kashi China 18 21 October 2024 The topics covered include Internet of Things and Smart Systems Artificial Intelligence and Applications Detection Analysis and Application of Communication Systems Cloud Computing and Security and Medical Engineering and Information Systems Each section of this book can serve as an excellent reference for industry practitioners university faculty research fellows undergraduate and graduate students who wish to build a knowledge base of the latest advances and state of the art practices in the topics covered Using this knowledge they will be able to design implement and manage systems that are both complex and trustworthy We would like to thank the authors for their hard work and dedication and the reviewers for their efforts in ensuring that only the highest quality papers were selected Without their contributions the proceedings would not have been possible **Autonomous Agents and Multiagent Systems** Nardine Osman, Carles Sierra, 2016-09-23 This book constitutes the most visionary papers of the AAMAS 2016 Workshops held in Singapore Singapore in May 2016 The 12 revised full papers presented were carefully reviewed and selected from the 12 workshops They cover specific topics both
