Auguste Laurent and the Prehistory of Valence Mary Eunice Novitski, 1992 This study focuses on the French chemists of 1830 1858 and their roles in the development of organic chemistry and its eventual connection with atomic and valence bond theory and uncovers new complexities in the thought processes that led to the concept of valence The exploration of Laurent s early career reveals that this French chemist had proposed a hypothesis to explain phenomena due to valence fifteen years before August Kekule s Exposition of the classic valence bond theory in 1858 Laurent put forward a hypothesis supposing the dividibility of atoms at a time when such a theory was far removed from the possibility of experimentation Within the positivist philosophy which prevailed at the time few besides him would have dared to advance such a hypothesis Laurent s hypothesis influenced certain advances in his chemistry and that of his close associate Charles Gerhardt and eventually these

advances helped turn most chemists to atomism
