Answers Database Systems 10th Edition:

Flexible Query Answering Systems Henrik Legind Larsen, 1998 This book constitutes the thoroughly refereed post workshop proceedings of the Third International Conference on Flexible Query Answering Systems FQAS 98 held in Roskilde Denmark in May 1998 The 32 revised papers presented were carefully reviewed and went through two rounds of selection for inclusion in the proceedings This book is the first one focused on flexible query answering systems this emerging area of research and development builds on results from mathematical logic fuzzy logic various database paradigms information retrieval linguistics and human computer interaction The papers deal with issues occurring in querying databases and the Internet

Advanced Database Systems Peter M.D. Gray, 1992-06-24 The theme of this book is the potential of new advanced database systems The volume presents the proceedings of the 10th British National Conference on Databases held in Aberdeen Scotland in July 1992 The volume contains two invited papers one on the promise of distributed computing and the challenges of legacy systems by M L Brodie and the other on object oriented requirements capture and analysis and the Orca project by D J L Gradwell The following four parts each contain three submitted papers selected from a total of 36 submissions The parts are entitled Object oriented databases Parallel implementations and industrial systems Non relational data models Logic programming and databases

Database Programming Languages Gavin Bierman, Christoph Koch, 2005-12-02 This book constitutes the thoroughly refereed post proceedings of the 10th International Workshop on Database Programming Languages DBPL 2005 held in Trondheim Norway in August 2005 in conjunction with VLDB 2005 and in coordination with the XML Database Symposium XSym 2005 The 17 revised full papers presented together with an invited paper were carefully selected during two round of reviewing and revision from 63 submissions The papers are organized in topical sections on XML languages XML and P2P data integration XML query languages types and XML grammars automata and tree as well as dependencies and constraints

Advances in Intelligent Networking and Collaborative Systems Fatos Xhafa, Leonard Barolli, Michal Greguš, 2018-08-25 This book provides the latest research findings and discusses from both theoretical and practical perspectives innovative research methods and development techniques related to intelligent social networks and collaborative systems intelligent networking systems mobile collaborative systems and secure intelligent cloud systems It also presents the synergies among various paradigms in such a multi disciplinary field of intelligent collaborative systems With the rapid development of the Internet we are experiencing a shift from the traditional sharing of information and applications as the main purpose of the Web to an emergent paradigm which locates people at the very centre of networks and exploits the value of individuals connections relations and collaboration Social networks are also playing a major role in the dynamics and structure of intelligent Web based networking and collaborative systems Virtual campuses virtual communities and organizations strongly leverage intelligent networking and collaborative systems by means of a great variety of formal and informal electronic relations such as business to business peer to peer and

various types of online collaborative learning interactions including the emerging e learning systems This has resulted in entangled systems that need to be managed efficiently and autonomously In addition the latest powerful technologies based on grid and wireless infrastructure as well as cloud computing are currently enhancing collaborative and networking applications significantly but are also facing new issues and challenges The principal purpose of the research and development community is to stimulate research that will lead to the creation of responsive environments for networking and in the longer term the development of adaptive secure mobile and intuitive intelligent systems for collaborative work and learning

Database Theory - ICDT 2005 Thomas Eiter,2005-02-14 This book constitutes the refereed proceedings of the 10th International Conference on Database Theory ICDT 2005 held in Edinburgh UK in January 2005 The 24 revised full papers presented together with 3 invited articles were carefully reviewed and selected from 84 submissions The papers are organized in topical sections on query languages and types multi dimensional data processing algorithmic aspects privacy and security logic and databases query rewriting and query processing and data streams

XML Data Mining: Models, Methods, and Applications Tagarelli, Andrea,2011-11-30 The widespread use of XML in business and scientific databases has prompted the development of methodologies techniques and systems for effectively managing and analyzing XML data This has increasingly attracted the attention of different research communities including database information retrieval pattern recognition and machine learning from which several proposals have been offered to address problems in XML data management and knowledge discovery XML Data Mining Models Methods and Applications aims to collect knowledge from experts of database information retrieval machine learning and knowledge management communities in developing models methods and systems for XML data mining This book addresses key issues and challenges in XML data mining offering insights into the various existing solutions and best practices for modeling processing analyzing XML data and for evaluating performance of XML data mining algorithms and systems

Introduction to Constraint Databases Peter

Revesz,2006-04-18 Differing from other books on the subject this one uses the framework of constraint databases to provide a natural and powerful generalization of relational databases An important theme running through the text is showing how relational databases can smoothly develop into constraint databases without sacrificing any of the benefits of relational databases whilst gaining new advantages Peter Revesz begins by discussing data models and how queries may be addressed to them From here he develops the theory of relational and constraint databases including Datalog and the relational calculus concluding with three sample constraint database systems DISCO DINGO and RATHER Advanced undergraduates and graduates in computer science will find this a clear introduction to the subject while professionals and researchers will appreciate this novel perspective on their subject

Datalog and Logic Databases Sergio Greco,Cristian

Molinaro,2022-05-31 The use of logic in databases started in the late 1960s In the early 1970s Codd formalized databases in terms of the relational calculus and the relational algebra A major influence on the use of logic in databases was the

development of the field of logic programming Logic provides a convenient formalism for studying classical database problems and has the important property of being declarative that is it allows one to express what she wants rather than how to get it For a long time relational calculus and algebra were considered the relational database languages However there are simple operations such as computing the transitive closure of a graph which cannot be expressed with these languages Datalog is a declarative query language for relational databases based on the logic programming paradigm One of the peculiarities that distinguishes Datalog from query languages like relational algebra and calculus is recursion which gives Datalog the capability to express queries like computing a graph transitive closure Recent years have witnessed a revival of interest in Datalog in a variety of emerging application domains such as data integration information extraction networking program analysis security cloud computing ontology reasoning and many others The aim of this book is to present the basics of Datalog some of its extensions and recent applications to different domains

Journal on Data Semantics VI Stefano Spaccapietra, Karl Aberer, Philippe Cudré-Mauroux, 2006-08-29 Data warehousing and semantic data mining Spatial temporal multimedia and multimodal semantics Semantics in data visualization Semantic services for mobile users Supporting tools Applications of semantic driven approaches These topics are to be understood as specifically related to semantic issues Contributions submitted to the journal and dealing with semantics of data will be considered even if they are not within the topics in the list While the physical appearance of the journal issues looks like the books from the well known Springer LNCS series the mode of operation is that of a journal Contributions can be freely submitted by authors and are reviewed by the Editorial Board Contributions may also be invited and nevertheless carefully reviewed as in the case for issues that contain extended versions of best papers from major conferences addressing data semantics issues Special issues focusing on a specific topic are coordinated by guest editors once the proposal for a special issue is accepted by the Editorial Board Finally it is also possible that a journal issue be devoted to a single text The journal published its first volume in 2003 LNCS 2800 its second volume at the beginning of 2005 LNCS 3360 and its third volume in Summer 2005 LNCS 3534 Volumes I II and V are special issues composed of selected extended versions of best conference papers Volume III is a special issue on Semantic Based Geographical Information Systems coordinated by guest editor Esteban Zimanyi

Handbook of Data Quality Shazia Sadiq, 2013-08-13 The issue of data quality is as old as data itself However the proliferation of diverse large scale and often publically available data on the Web has increased the risk of poor data quality and misleading data interpretations On the other hand data is now exposed at a much more strategic level e.g. through business intelligence systems increasing manifold the stakes involved for individuals corporations as well as government agencies There the lack of knowledge about data accuracy currency or completeness can have erroneous and even catastrophic results With these changes traditional approaches to data management in general and data quality control specifically are challenged There is an evident need to incorporate data quality considerations into the whole data cycle encompassing managerial governance as well as technical

aspects Data quality experts from research and industry agree that a unified framework for data quality management should bring together organizational architectural and computational approaches Accordingly Sadiq structured this handbook in four parts Part I is on organizational solutions i e the development of data quality objectives for the organization and the development of strategies to establish roles processes policies and standards required to manage and ensure data quality Part II on architectural solutions covers the technology landscape required to deploy developed data quality management processes standards and policies Part III on computational solutions presents effective and efficient tools and techniques related to record linkage lineage and provenance data uncertainty and advanced integrity constraints Finally Part IV is devoted to case studies of successful data quality initiatives that highlight the various aspects of data quality in action The individual chapters present both an overview of the respective topic in terms of historical research and or practice and state of the art as well as specific techniques methodologies and frameworks developed by the individual contributors Researchers and students of computer science information systems or business management as well as data professionals and practitioners will benefit most from this handbook by not only focusing on the various sections relevant to their research area or particular practical work but by also studying chapters that they may initially consider not to be directly relevant to them as there they will learn about new perspectives and approaches

Flexible Databases Supporting Imprecision and Uncertainty Gloria Bordogna, Giuseppe Psaila, 2007-06-02 This volume offers the advice of selected expert contributors on the application of heterogeneous methods for managing uncertainty and imprecision in databases It contains both survey chapters on classic topics such as flexible querying in databases and up to date information on database models to represent imperfect data Further it includes specific contributions on uncertainty management in database integration and in representing and querying semistructured and spatial data

Principles and Practice of Constraint Programming Alan H. Borning, Alan Borning, 1994-10-12 This volume is the proceedings of the Second International Workshop on the Principles and Practice of Constraint Programming held at Rosario Orcas Island Washington USA in May 1994 in cooperation with AAAI and ALP The volume contains 27 full revised papers selected from 87 submissions as well as a summary of a panel session on commercial applications of constraint programming The contributions cover a broad range of topics including constraint programming languages algorithms for constraint satisfaction and entailment and constraints and their relation to fields such as artificial intelligence databases operations research problem solving and user interfaces

Flexible Query Answering Systems, 2000

Global Data Management Roberto Baldoni, 2006 Some researcher has created the vision of the data utility as a key enabler towards ubiquitous and pervasive computing Decentralization and replication would be the approach to make it resistant against security attacks This book presents an organic view on the research and technologies which bring us towards the realization of the vision

Objects and Databases Klaus R. Dittrich, Giovanna Guerrini, Isabella Merlo, Marta Oliva, M. Elena Rodriguez, 2003-06-29 These post proceedings contain the revised versions of the papers

presented at the Symposium on Objects and Databases which was held in Sophia Antipolis France June 13 2000 in conjunction with the Fourteenth European Conference on Object Oriented Programming ECOOP 2000 This event continued the tradition established the year before in Lisbon Portugal with the First Workshop on Object Oriented Databases The goal of the symposium was to bring together researchers working in various corners of the field of objects and databases to discuss the current state of research in the field and to critically evaluate existing solutions in terms of their current usage their successes and limitations and their potential for new applications The organizing committee received 21 papers which were reviewed by a program committee of people active in the field of objects and databases There were 3 reviews for each paper and finally the organizing committee selected 9 long papers 2 short papers and a demonstration to be presented and discussed at the symposium The selected papers cover a wide spectrum of topics including data modeling concepts persistent object languages consistency and integrity of persistent data storage structures class versioning and schema evolution query languages and temporal object oriented databases In addition to the regular papers the symposium included an invited presentation given by Prof Malcolm Atkinson from the University of Glasgow Scotland where he heads the Persistence and Distribution Group

Tenth International Workshop on Database and Expert Systems Applications Antonio Cammelli, A. Min Tjoa, Roland R. Wagner, 1999 Proceedings of the September 1999 workshop on defining requirements for future systems in the areas of database and artificial technologies The 151 contributions discuss innovative applications and new architectures mobility in databases and distributed systems similarity search web based inform

Database Systems for Advanced Applications Weiyi Meng, Ling Feng, Stephane Bressan, Werner Winiwarter, Wei Song, 2013-04-17 This two volume set LNCS 7825 and LNCS 7826 constitutes the refereed proceedings of the 18th International Conference on Database Systems for Advanced Applications DASFAA 2013 held in Wuhan China in April 2013 The 51 revised full papers and 10 short papers presented together with 2 invited keynote talks 1 invited paper 3 industrial papers 9 demo presentations 4 tutorials and 1 panel paper were carefully reviewed and selected from a total of 227 submissions The topics covered in part 1 are social networks query processing nearest neighbor search index query analysis XML data management privacy protection and uncertain data management and in part 2 graph data management physical design knowledge management temporal data management social networks query processing data mining applications and database applications

Principles and Practice of Constraint Programming - CP '95 Ugo Montanari, 1995-09-06 This book constitutes the proceedings of the First International Conference on Principles and Practice of Constraint Programming CP 95 held in Cassis near Marseille France in September 1995 The 33 refereed full papers included were selected out of 108 submissions and constitute the main part of the book in addition there is a 60 page documentation of the four invited papers and a section presenting industrial reports Thus besides having a very strong research component the volume will be attractive for practitioners The papers are organized in sections on efficient constraint handling constraint logic programming concurrent constraint

programming computational logic applications and operations research Intensional First-Order Logic Zoran Majkic, 2022-09-06 This book introduces the properties of conservative extensions of First Order Logic FOL to new Intensional First Order Logic IFOL This extension allows for intensional semantics to be used for concepts thus affording new and more intelligent IT systems Insofar as it is conservative it preserves software applications and constitutes a fundamental advance relative to the current RDB databases Big Data with NewSQL Constraint databases P2P systems and Semantic Web applications Moreover the many valued version of IFOL can support the AI applications based on many valued logics

Foundations of Intelligent Systems Zbigniew W. Ras, Andrzej Skowron, 1997-09-29 This book constitutes the refereed proceedings of the 10th International Symposium on Methodologies for Intelligent Systems ISMIS 97 held in Charlotte NC USA in October 1997 The 57 revised full papers were selected from a total of 117 submissions Also included are four invited papers Among the topics covered are intelligent information systems approximate reasoning evolutionary computation knowledge representation and integration learning and knowledge discovery AI Logics discovery systems data mining query processing etc
