Thomas, 2012-12-06 The use of performance enhancing substances by athletes is not a contemporary epidemic In fact athletes purportedly resorted to such measures over 2000 years ago Even at the ancient olympic games athletes employed special diets and concoctions to enhance their performance In ancient Rome and ancient Egypt gladiators and athletes ingested various potions in order to improve their physical endurance In most instances such early examples of substance abuse by athletes involved relatively innoxious chemicals and one might presume that any enhanced performance could be attributed largely to a placebo effect Nowadays

aside from the ethical issues these performance enhancing substances are far more potent and hence toxic to the body The many performance enhancing chemicals drugs and hormones exert a variety of complex pharmacological actions but all are meant in some fashion to improve physical ability Their pharmacological effects ranges from improved muscle strength as in the case of anabolic steroids and growth hormone to central nervous system stimulation as in the case of caffeine or amphetamine Analgesics or other pain killing drugs may also be used to suppress an existing injury in order that the athlete may compete
