Answering Question With A Question:

Question Answering over Text and Knowledge Base Saeedeh Momtazi, Zahra Abbasiantaeb, 2022-11-04 This book provides a coherent and complete overview of various Question Answering QA systems. It covers three main categories based on the source of the data that can be unstructured text TextQA, structured knowledge graphs KBQA, and the combination of both. Developing a QA system usually requires using a combination of various important techniques including natural language processing, information retrieval and extraction, knowledge graph processing, and machine learning. After a general introduction and an overview of the book in Chapter 1, the history of QA systems and the architecture of different QA approaches are explained in Chapter 2. It starts with early close domain QA systems and reviews different generations of QA up to state of the art hybrid models. Next, Chapter 3 is devoted to explaining the datasets and the metrics used for evaluating TextQA and KBQA. Chapter 4 introduces the neural and deep learning models used in QA systems. This chapter includes the required knowledge of deep learning and neural text representation models for comprehending the QA models over text and QA models over knowledge base explained in Chapters 5 and 6 respectively. In some of the KBQA models, the textual data is also used as another source besides the knowledge base; these hybrid models are studied in Chapter 7. In Chapter 8, a detailed explanation of some well known real applications of the QA systems is provided. Eventually, open issues and future work on QA are discussed in Chapter 9. This book delivers a comprehensive overview on QA over text, QA over knowledge base, and hybrid QA systems which can be used by researchers starting in this field. It will help its readers to follow the state of the art research in the area by providing essential and basic knowledge.

Answering Questions With Statistics Robert

Szafran, 2011-10-20 The book is divided into three Parts. Part One has chapters that introduce data analysis and SPSS. Part Two contains eight chapters on descriptive statistics that begin with frequency tables and go through multiple regression, and Part Three includes six chapters on inferential statistics. Part One Getting Started begins by answering some questions most students have right at the start: questions like why study data analysis and how much math and computer knowledge is required. Essential concepts from research methods relevant for data analysis are also explained. Part Two Descriptive Statistics Answering Questions about Your Data demonstrates procedures to use when the analyst is only concerned with describing the cases for which he or she actually has data. Statistics summarizing single variables univariate statistics are presented first, and then statistics summarizing relationships between variables multivariate statistics. Frequency tables, measures of central tendency, measures of dispersion, crosstabs, measures of association, subgroup means, and regression are all covered, as are bar charts, pie charts, histograms, and clustered bar charts. Part Three Inferential Statistics Answering Questions about Populations explains procedures which allow the analyst to draw conclusions about the population from which his or her sample of cases was randomly selected. It begins with a simple chapter on the statistical theory behind inferential statistics. A four step approach to hypothesis testing is introduced in the next chapter and demonstrated with one

sample t test hypotheses The remaining chapters present different types of hypothesis tests including paired samples independent samples one and two way ANOVA and chi square Provided by publisher *Advances in Open Domain Question Answering* Tomek Strzalkowski,Sanda Harabagiu,2006-10-07 Automated question answering the ability of a machine to answer questions simple or complex posed in ordinary human language is one of today s most exciting technological developments It has all the markings of a disruptive technology one that is poised to displace the existing search methods and establish new standards for user centered access to information This book gives a comprehensive and detailed look at the current approaches to automated question answering The level of presentation is suitable for newcomers to the field as well as for professionals wishing to study this area and or to build practical QA systems The book can serve as a how to handbook for IT practitioners and system developers It can also be used to teach advanced graduate courses in Computer Science Information Science and related disciplines The readers will acquire in depth practical knowledge of this critical new technology
