Transforming Curriculum Through Teacher-Learner Partnerships Nair, Pradeep, Keppell, Michael James, Lim, Chee Leong, Mari, Tamil Salvi, Hassan, Nurhanim, 2020-12-11 Empowering learners for life requires a fundamental shift in higher education curriculum design. New priorities, pedagogies, technologies, spaces, and assessment strategies are required to enable learners to take ownership of their learning. Student-centeredness concepts are still prescriptive in nature as most decisions on curriculum, assessment, teaching, and learning approaches are still teacher-centric. Teachers are developing student-centered learning environments without the involvement of the learners in the planning, decision-making, and/or design process. In addition, some lecturers are still practicing the traditional approaches of content delivery and conventional assessment methods rather than experimenting with innovative practices suited for student-centered approaches. Therefore, there is an ongoing need for research focused on the importance and effectiveness of a paradigm shift in education that involves student-teacher partnerships fueled by innovative teaching and learning designs where students take an active role and contribute as partners in learning. *Transforming Curriculum Through Teacher-Learner Partnerships* captures experiences and evidence among teachers in exploring the possibility of active student participation in curriculum design, delivery, and assessment through teacher-learner partnership. The chapters address issues of teacher-learner partnerships in designing the learning environment and how student-centered methods create resilient, adaptable, and future-capable learners. While highlighting topics within this scope such as learner autonomy, learning performance, self-efficacy, and teaching pedagogy, this book is ideally intended for teachers, administrators, teacher educators, practitioners, stakeholders, researchers, academicians, and students interested in issues related to the teacher-learner partnership.

Abstract

Mathematical Cognition Wolfgang Grodd,Philippe Chassy,2016-08-09 Despite the importance of mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated view of abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage where we seek to understand how these basics skills are used to support the acquisition and use of abstract mathematical concepts

Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers

Post-2020 Climate Action Shinichiro Fujimori, Mikiko Kainuma, Toshihiko Masui, 2017-09-16 This book summarizes assessments of the Paris Agreement to provide an excellent introduction to this research field The AIM CGE Asia Pacific Integrated Modeling Computable General Equilibrium model which is the core of AIM modeling framework is used for the assessment The first part focuses on global issues presenting both short term a few decades and long term century scale assessments in the context of the Agreement's ultimate climate goal It also discusses policy implementation and climate risk Part 2 is a collection of assessments of individual Asian countries providing insights into the national situations and detailed analyses It includes contributions from Asian countries as well as NIES National Institute for Environmental Studies Japan members The main conclusion is that many countries require changes to their energy systems change and societal transformation in order to meet emissions targets Part 3 describes in detail the AIM CGE model which is used to evaluate the climate and energy policies by simulating the future economic and energy and environmental situation in the Asia Pacific region This section can be used as a standard text on CGE modelling in climate change mitigation

New Methods in Cognitive Psychology Daniel Spieler, Eric Schumacher, 2019-10-28 This book provides an overview of cutting edge methods currently being used in cognitive psychology which are likely to appear with increasing frequency in coming years Once built around univariate parametric statistics cognitive psychology courses now seem deficient without some contact with methods for signal processing spatial statistics and machine learning There are also important changes in analyses of behavioral data e g hierarchical modeling and Bayesian inference and there is the obvious change wrought by the advancement of functional imaging This book begins by discussing the evidence of this rapid change for example the movement between using traditional analyses of variance to multi level mixed models in psycholinguistics It then goes on to discuss the methods for analyses of physiological measurements and how these methods provide insights into cognitive processing *New Methods in Cognitive Psychology* provides senior undergraduates graduates and researchers with cutting edge overviews of new and emerging topics and the very latest in theory and research for the more established topics
