2015 Time Table Matric Rewrite:

Frontiers in Environmental Science - Editor's Picks 2021 Martin Siegert, 2021-11-24 **Contested Karoo: Interdisciplinary perspectives on change and continuity in South Africa's drylands** Cherryl Walker, M Timm Hoffman, 2024-05-15 This interdisciplinary collection explores significant land use changes in South Africa's semi arid Karoo region and their implications for social justice and the environment across different scales. It brings together recent scholarship by established and younger researchers in both the social and the natural sciences to examine the ways in which the Karoo is being reconfigured as a new resource frontier and the tensions and contestations that result. Along with ongoing mining major investments in astronomy notably the Square Kilometre Array radio telescope in renewable and non renewable sources of energy solar wind potential shale gas mining in biodiversity conservation and commercial game farming are reshaping land use and authority in this vast and long marginalised area. While promising significant benefits to society at large these developments are built on older histories of dispossession and extractivism histories that many Karoo residents fear are being reproduced in new forms today. Collectively these dynamics place this unique region at the centre of national and global concerns around climate change the politics of knowledge production the conservation of threatened biodiversity and the meaning and possibility of sustainable development. These issues are explored through a series of case studies of selected developments complemented by chapters providing more historical context and general overviews. While challenging perceptions of this region as a peripheral wasteland this collection raises conceptual and policy questions that resonate far beyond the Karoo itself. It also highlights the importance of interdisciplinary collaboration in research aimed not only at understanding but also at responding appropriately to the mounting challenges of our time. *Advancements in Urban Environmental Studies* Atiqur Rahman, Shouraseni Sen Roy, Swapan Talukdar, Shahfahad, 2023-03-03 According to UN estimates approximately nearly half of the world's population now lives in cities and that figure is expected to rise to almost 70% by 2050. Cities now account for around 70% of worldwide greenhouse gas emissions and this percentage is predicted to rise in the near future as a result of projected increases in global urbanization patterns. It is widely acknowledged that irrational urban planning and design can increase emissions while also exacerbating threats and risks resulting in a slew of environmental issues such as urban heat islands air pollution flooding amongst other issues as well as environmental social and economic losses. Therefore these concerns must be addressed promptly in order to cope up with these rising difficulties and make urban environments safer for residents. With the advancement of remote sensing technology and the use of current remote observation systems urban data science remote sensing and artificial intelligence AI modeling and quantifying emergent difficulties in urban regions and urban systems have become easy. They aid in the quantitative analysis of urban shape functions and human behavior in cities. Harvesting data developing models and suggesting new methodologies will be aided by combining urban ecology with new breakthroughs in data science. This book is of great value to a diverse group of

academicians scientists students environmentalists meteorologists urban planners remote sensing and GIS experts with a common interest in geospatial sciences within the earth environmental sciences as well as human and social sciences

The Palgrave Handbook of Global Rehabilitation in Criminal Justice Maurice Vanstone, Philip Priestley, 2022-11-22 This handbook provides a unique overview of rehabilitation as practiced internationally in criminal justice Through the contributions of a diverse group that includes among others academics some of whom are former practitioners research students a judge and a probation chief it reflects common features of criminal justice in different countries and documents their diversity and celebrates their vitality In recent times the idea of law and order has been expropriated by populist authoritarian and doctrinaire regimes almost always and nearly everywhere in the service of arbitrary and unjust rule By and large this handbook does not include such regimes But law itself also has the capacity to constrain rulers and order in the form of social peace is a universally approved civic asset In part the book provides a counter narrative demonstrating that although criminal justice dispositions such as probation prisons and parole can be represented as a via dolorosa rehabilitation as illustrated in these pages can become a journey that leads by degrees towards the possibility of a better life The handbook will be of interest to students academics practitioners managers policy makers and all those who wish to gain insight into the why and the how of rehabilitation in criminal justice

vivid example of South Africa a country that had ambitious goals at the outset of its transition from apartheid to democracy it explores how the interaction of politics and institutions affects educational outcomes By examining lessons learned from how South Africa failed to achieve many of its goals it constructs an innovative alternative strategy for making process combining practical steps to achieve incremental gains to re orient the system towards learning

Guidelines for Open Pit Slope Design in Weak Rocks Derek Martin, Peter Stacey, 2018-01-10 Weak rocks encountered in open pit mines cover a wide variety of materials with properties ranging between soil and rock As such they can provide a significant challenge for the slope designer For these materials the mass strength can be the primary control in the design of the pit slopes although structures can also play an important role Because of the typically weak nature of the materials groundwater and surface water can also have a controlling influence on stability *Guidelines for Open Pit Slope Design in Weak Rocks* is a companion to *Guidelines for Open Pit Slope Design* which was published in 2009 and dealt primarily with strong rocks Both books were commissioned under the Large Open Pit LOP project which is sponsored by major mining companies These books provide summaries of the current state of practice for the design implementation and assessment of slopes in open pits with a view to meeting the requirements of safety as well as the recovery of anticipated ore reserves This book which follows the general cycle of the slope design process for open pits contains 12 chapters These chapters were compiled and written by industry experts and contain a large number of case histories The initial chapters address field data collection the critical aspects of determining the strength of weak rocks the role of groundwater in weak rock slope stability and slope design considerations which can differ somewhat from those applied to strong rock The subsequent chapters address the principal weak rock types that are encountered in open pit mines including cemented colluvial sediments weak sedimentary mudstone rocks soft coals and chalk weak limestone saprolite soft iron ores and other leached rocks and hydrothermally altered rocks A final chapter deals with design implementation aspects including mine planning monitoring surface water control and closure of weak rock slopes As with the other books in this series *Guidelines for Open Pit Slope Design in Weak Rocks* provides guidance to practitioners involved in the design and implementation of open pit slopes particularly geotechnical engineers mining engineers geologists and other personnel working at operating mines
