Unbound Heather Boushey, 2019-10-15 A Financial Times Book of the Year The strongest documentation I have seen for the many ways in which inequality is harmful to economic growth Jason Furman A timely and very useful guide Boushey assimilates a great deal of recent economic research and argues that it amounts to a paradigm shift New Yorker Do we have to choose between equality and prosperity Decisions made over the past fifty years have created underlying fragilities in our society that make our economy less effective in good times and less resilient to shocks

such as today's coronavirus pandemic. Many think tackling inequality would require such heavy-handed interference that it would stifle economic growth. But a careful look at the data suggests nothing could be further from the truth and that reducing inequality is in fact key to delivering future prosperity. Presenting cutting-edge economics with verve, Heather Boushey shows how rising inequality is a drain on talent, ideas, and innovation, leading to a concentration of capital and a damaging underinvestment in schools, infrastructure, and other public goods. We know inequality is fueling social unrest; Boushey shows persuasively that it is also a serious drag on growth. In this outstanding book, Heather Boushey shows that beyond a point, inequality damages the economy by limiting the quantity and quality of human capital and skills, blocking access to opportunity, underfunding public services, facilitating predatory rent-seeking, weakening aggregate demand, and increasing reliance on unsustainable credit. Martin Wolf, *Financial Times*. Think rising levels of inequality are just an inevitable outcome of our market-driven economy. Then you should read Boushey's well-argued, well-documented explanation of why you're wrong. David Rotman, *MIT Technology Review*. *The Living Planet*, Norman Maclean, 2023-04-20. This comprehensive volume describes the present state of wildlife on a global scale using a taxonomic approach.

Conservation Agriculture: A Sustainable Approach for Soil Health and Food Security Somasundaram Jayaraman, Ram C. Dalal, Ashok K. Patra, Suresh K. Chaudhari, 2021-08-20. Feeding the increasing global population which is projected to reach 10 billion by 2050, there has been increasing demands for more improved sustainable agricultural management practices that can be followed by farmers to improve productivity without jeopardizing the environment and ecosystem. Indeed, about 95% of our food directly or indirectly comes from soil. It is a precious resource, and sustainable soil management is a critical socio-economic and environmental issue. Maintaining the environmental sustainability while the world is facing resource degradation, increasing climate change, and population explosion is the current challenge of every food production sector. Thus, there is an urgent need to evolve a holistic approach such as conservation agriculture to sustain higher crop productivity in the country without deteriorating soil health. Conservation Agriculture (CA) is a sustainable approach to manage agro-ecosystems in order to improve productivity, increase farm profitability, and food security, and also enhance the resource base and environment. Worldwide, it has been reported various benefits and prospects in adopting CA technologies in different agro-climatic conditions. Yet, CA in arid and semi-arid regions of India and parts of South Asia raises uncertainties due to its extreme climates, large-scale residue burning, soil erosion, and other constraints such as low water holding capacity, high potential evapotranspiration, etc. Thus, the proposed book has 30 chapters addressing all issues relevant to conservation agriculture, no-till farming system. The book also gives further strengthening of existing knowledge in relation to soil physical, chemical, and biological processes and health within close proximity of CA, as well as machinery requirements. Moreover, the information on carbon (C) sequestration, C credits, greenhouse gas (GHG) emission mitigation, climate change effects, and socio-economic view on CA under diverse ecologies, namely rainfed, irrigated, and hill eco-region, is also deliberated. For large-scale

adoption of CA practices in South Asian region especially in India and other countries need dissemination of best bet CA technologies for dominant soil types cropping systems through participatory mode strong linkages and institutional mechanism and public private policy support We hope this book gives a comprehensive and clear picture about conservation agriculture no till farming and its associated problem challenges prospects and benefits This book shall be highly useful reference material to researchers scientists students farmers and land managers for efficient and sustainable management of natural resources
