active learning *Thinking Physics for Teaching* C. Bernardini, C. Tarsitani, M. Vicentini, 2012-12-06 The research in Physics Education has to do with the search of solutions to the complex problem of how to improve the learning and teaching of physics The complexity of the problem lies in the different fields of knowledge that need to be considered in the research In fact besides the disciplinary knowledge in physics which must be considered from the conceptual the historical and the epistemological framework one has to take into account some basic knowledge in the context of psychology and the cognitive sciences for the general and contextual aspects of learning and some basic knowledge in education and communication for what concerns teaching skills and strategies Looking back at the historical development of the research one may recognize that the complexity of the endeavour was not clear at first but became clear in its development which shifted the focus of the research in the course of time from physics to learning to teaching We may say that the research started more than 30 years ago with a focus on disciplinary knowledge Physicists in different parts of the western world after research work in some field of physics decided to concentrate on the didactical communication of physical knowledge **The Structure and**

Stachel, 1997-06-30 Potentiality Entanglement and Passion at a Distance is a book for theoretical physicists and philosophers of modern physics It treats a puzzling and provocative aspect of recent quantum physics the apparent interaction of certain physical events that cannot share any causal connection These are said to be entangled in some way but an explanation remains elusive Abner Shimony to whom the book is dedicated and

others suggest the need to revive the category of what may be seen as a metaphysical potentiality Abner has described these events without actions to link them as passion at a distance not active but passive The discussions gathered here are written by a truly remarkable cast of scientists and philosophers and shed new light on the most profound puzzles of our times
