

Topic 2 – Organisation

Cell Organisation

Large Multicellular Organisms are Made Up of Organ Systems

Cells are the basic building blocks that make up all living organisms.

1. **Specialised cells** carry out a **particular function**.
2. The **process** by which cells become specialised for a particular job is called **differentiation**. Differentiation occurs during the **development** of a multicellular organism.
3. These specialised cells form **tissues**, which form **organs**, which form **organ systems**.
4. **Large multicellular organisms** (e.g. humans) have different **systems** inside them for **exchanging and transporting** materials.

Similar Cells are Organised into Tissues

A tissue is a group of similar cells that work together to carry out a particular function. It can include more than one type of cell.

In **mammals** (like humans), examples of tissues include:

1. **Structural tissues**, which **contract** (shorten) to **move** whatever it's attached to.
2. **Glandular tissues**, which **make and secrete** chemicals like **enzymes and hormones**.
3. **Epithelial tissues**, which **cover** some parts of the body, e.g. the **inside of the gut**.

Tissues are Organised into Organs

An organ is a group of different tissues that work together to perform a certain function.

For example, the **stomach** is an organ made of these tissues:

1. **Muscular tissues**, which move the stomach wall to **churn up the food**.
2. **Glandular tissues**, which make **digestive juices** to digest food.
3. **Epithelial tissues**, which cover the **outside and inside** of the stomach.

Organs are Organised into Organ Systems

An organ system is a group of organs working together to perform a particular function.

For example, the **digestive system** found in humans and other mammals **breaks down and absorbs food**. It's made up of these organs:

1. **Stomach** (e.g. the **cardiac and pyloric stomach**), which produce **digestive juices**.
2. The **stomach and small intestine**, which **digest** food.
3. The **liver**, which produces **bile**.
4. The **small intestine**, which **absorbs** its valuable food molecules.
5. The **large intestine**, which **absorbs water** from undigested food, leaving **faeces**.
