Resources in Education ,1991-07 **Curriculum-based Assessment** Carroll J. Jones,2008 Although curriculum based assessment CBA has been on the horizon for a number of years there has been a need for a practical classroom based approach for its implementation This second edition is a major revision and update that offers practical and specific methods for developing and using CBAs in an educational setting It gives educators a highly specific step by step approach to building CBAs in the area of reading word recognition reading comprehension content reading mathematics and written expression Each chapter offers detailed easy to read and easy to follow instructions for the assessment construction process To further clarify the process extensive examples are given in table format A unique feature of the text is the manner in which the author illustrates the principles of CBA by providing a case study on one student which is referred to in each chapter Its formative assessment approach gives the teacher additional detailed information about students OCO performance which in turn should guide the type of instruction designed and implemented ultimately leading to higher performance on summative outcome measures Addition ally detailed information is provided on subject area CBA construction the creation and implementation of a district wide CBA system for response to intervention and how to use IDEA S response to intervention in student evaluation *Investigations in Mathematics Education* ,1974 *Too Simple to Fail* R. Barker Bausell,2010-11-01 Too Simple to Fail presents a startling dissection of what is wrong with our educational system and a set of simple common sense steps for improving it This simplicity Bausell argues characterizes both the schooling process and the science of education as witnessed by legions of researchers who have discovered precious little that their grandmothers didn t already know Yet surprisingly based upon the author s own studies and a review of the past 30 years of educational research these discoveries boil down to a simple but powerful theory The only way schools can increase learning is to increase the amount of relevant instructional time for all students Here Bausell demonstrates that classroom instruction is hopelessly obsolete as are our current testing practices both contributing to the widening opportunity gap between socioeconomic and racial groups But with an understanding of what is wrong with education today comes the revelation that the answer to these deficiencies has been available to us all along in the form of the tutorial model the most effective instructional paradigm ever developed Only in recent years has it become feasible to simulate this extremely effective instructional medium as a universal option that in effect would allow schools to provide relevant instruction as a rule and not an exception If implemented a new world of opportunity and potential will finally be available to children whose learning is so crucial for our future The new model presented in this book has implications for identifying not only what is wrong with the way we educate our young but also why it is wrong and how the educational process can be made more efficient effective and fair Pacesetters in Innovation United States.
