

Geometry 10-6 Secants, Tangents, and Angle Measures

A. Intersections on or inside a circle.

1. A line that intersects a circle in exactly two points is called a _____.
- A secant of a circle contains a chord of the circle.

2. Theorem 10-12 – If two secants intersect in the interior of a circle, then the measure of an angle formed is one-half the sum of the measures of the arcs intercepted by the angle and its vertical angle.

Examples: $m\angle 1 = \frac{m\widehat{AC} + m\widehat{DB}}{2}$

$$m\angle 2 = \frac{m\widehat{AD} + m\widehat{BC}}{2}$$

Ex. 1: Find $m\angle 4$ if $m\widehat{FG} = 88$ and $m\widehat{EH} = 76$

3. Theorem 10-13 – If a secant and a tangent intersect at the point of tangency, then the measure of each angle formed is _____ the measure of its intercepted arc.

Ex. 2: Find $m\angle RPS$ if $m\widehat{PT} = 114^\circ$ and $m\widehat{TS} = 136^\circ$

Calculus: A Historical Approach W.M. Priestley, 2012-12-06 This book is for students being introduced to calculus and it covers the usual topics but its spirit is different from what might be expected. Though the approach is basically historical in nature emphasis is put upon ideas and their place not upon events and their dates. Its purpose is to have students learn calculus first and to learn incidentally something about the nature of mathematics. Somewhat to the surprise of its author the book soon became animated by a spirit of opposition to the darkness that separates the sciences from the humanities. To fight the spell of that darkness anything at hand is used even a few low tricks or bad jokes that seemed to offer a slight promise of success. To lighten the darkness to illuminate some of the common ground shared by the two cultures is a goal that justifies almost any means. It is possible that this approach may make calculus more fun as well. Whereas the close ties of mathematics to the sciences are well known the ties binding mathematics to the humanities are rarely noticed. The result is a distorted view of mathematics placing it outside the mainstream of liberal arts studies. This book tries to suggest gently from time to time where a kinship between mathematics and the humanities may be found.
