Sustainable Agriculture Reviews 28 Sabrina Gaba,Barbara Smith,Eric Lichtfouse,2018-05-16 This book presents ecological principles and applications of managing biodiversity in agriculture to decrease pesticide use and produce safe food Major topics include ecosystem services biological pest control conservation agriculture drought stress and soil biodiversity carbon and fertilisation

Recent Advances in Weed Management Bhagirath S. Chauhan,Gulshan Mahajan,2014-07-10 This volume addresses recent developments in weed science These developments include conservation agriculture and conservation tillage climate change environmental concerns about the runoff of agrochemicals resistance of weeds and crops to herbicides and the need for a vastly improved understanding of weed ecology and herbicide use The book provides details on harnessing knowledge of weed ecology to improve weed management in different crops and presents information on opportunities in weed management in different crops Current management practices are also covered along with guidance for selecting herbicides and using them effectively Written by experts in the field and supplemented with instructive illustrations and tables Recent Advances in Weed Management is an essential reference for agricultural specialists and researchers government agents extension specialists and professionals throughout the agrochemical industry as well as a foundation for advanced students taking courses in weed science

Agronomic Crops Mirza Hasanuzzaman,2019-11-23 Agronomic crops have provided food beverages fodder fuel medicine and industrial raw materials since the beginning of human civilization More recently agronomic crops have been cultivated using scientific rather than traditional methods However in the current era of climate change agronomic crops are suffering from different environmental stresses that result in substantial yield loss To meet the food demands of the ever increasing global population new technologies and management practices are being adopted to boost yields and maintain productivity under both normal and adverse conditions Further in the context of sustainable agronomic crop production scientists are adopting new

approaches such as varietal development soil management nutrient and water management and pest management Researchers have also made remarkable advances in developing stress tolerance in crops However the search for appropriate solutions for optimal production to meet the increasing food demand is still ongoing Although there are several publications on the recent advances in these areas there are few comprehensive resources available covering all of the recent topics This timely book examines all aspects of production technologies management practices and stress tolerance of agronomic crops

Seed Dormancy and Germination Jose Carlos Jimenez-Lopez, 2020-01-08 Seed dormancy and germination are critical processes for the development of plants Seed dormancy allows seeds to overcome harsh periods of seedling establishment and is also important for plant agriculture and crop yield Several processes are involved in the induction of dormancy and in the shift from the dormant to the germinating state and hormones and regulatory genetic networks are among the critical factors driving these complex processes Germination can be prevented by different factors leading to seed dormancy which is highly dependent on environmental cues During and after germination early seedling growth is sustained by catabolism of stored reserves proteins lipids or starch accumulated during seed maturation supporting cell morphogenesis chloroplast development and root growth until photo auxotrophic growth can be resumed

Fundamentals of Weed Science Robert L Zimdahl, Nicholas T. Basinger, 2024-02-14 Fundamentals of Weed Science Sixth Edition places weed management in the context of weed research and science presenting the latest advances in the role control and potential uses of weed plants This book uses an ecological framework to explore the role of responsible and effective weed control in agriculture from the emergence and genetic foundation of weeds to the latest means of control and environmental effects Fully revised updated and expanded Fundamentals of Weed Science now includes insights into international trade and consumer preferences weed seedbanks advancements in robotic weeding weed flaming and the potential of precision agriculture in weed science Includes an emphasis on herbicide resistance and molecular biology both of which have come to dominate weed science research Covers all traditional aspects of weed science as well as current research Provides broad coverage including relevant related subjects like weed ecology and weed population genetics

Biostimulants in Plant Protection and Performance Azamal Husen, 2024-03-16 Biostimulants a diverse class of compounds including substances or microorganisms are helpful in sustainable plants growth and development They accelerate plant growth yield and chemical composition even under unfavorable conditions The main biostimulants are nitrogen containing compounds humic materials some specific compounds released by microbes plants and animals various seaweed extracts bio based nanomaterials phosphite silicon and so on Additionally new generation products and bioproducts are being developed for sustainable plant growth and protection Some research works in the area of biotechnology and nanobiotechnology have shown improved sustainable plant growth and production The protective roles of biostimulants are varied depends on the compound and plant species Exposure of biostimulants have shown accelerated plants growth and developmental processes

for instance manage stomatal conductance and rate of transpiration and increase rate of photosynthesis etc They also increased crop plants immune systems against the adverse situation Thus use of innovations of new generation biostimulants also enhance plant production systems through a significant reduction of synthetic chemicals such as pesticides and fertilizers Moreover bioinoculants commercial products obtained from seaweed extract humic acids amino acids fulvic acids and some microbial inoculants have shown their potential role in adventitious root induction in plants Microbial inoculants or microbial based biostimulants as a promising and eco friendly technology can be widely used to address environmental concerns and fulfill the need for developing sustainable or modern agriculture practices They have great potential to elicit plant tolerance to various climate change related stresses and thus enhance plant growth and overall performance related features However for successful implementation biostimulants based agriculture in the field under changing climate conditions an understanding of plant functions and biostimulants interaction or action mechanisms coping with various abiotic as well as biotic stresses at the physicochemical metabolic and molecular levels is required Mycorrhizae are beneficial fungi that form symbiotic associations with plants and aid in plant development disease resistance and soil health is well established Similarly phyllospheric microbiome are known to possess different plant growth promotion attributes like nitrogen fixation phosphate solubilization biocontrol activity and increase plant resistance towards abiotic stresses The plant growth promotion traits possessed by these phyllospheric microbiota can be judiciously harbored for phyllospheric and rhizospheric engineering The engineered phyllospheric and rhizospheric microbiome can increase the plant growth and productivity thereby can act as a driving force for increasing the agricultural production in a sustainable manner Taken together this book aims to contribute to the recent understanding associated with the various role and application of biostimulants on different plant for their sustainable growth and management Discusses our current understanding of and advances in biostimulants along with their application in plants growth performance and overall management Explores new techniques new generation products and bioproducts Highlights the role of seaweed extract humic acids protein hydrolysates amino acids melatonin paramylon fulvic acids microbial inoculants phyllospheric and rhizospheric and more
