Mesopotamian Sculpture in Colour Astrid Nunn, Heinrich Piening, 2020-12-31 We can now be sure that Mesopotamian sculpture of the human form was typically coloured Our project which set out to reconstruct the polychromy of Mesopotamian stone statues dating from the fourth to the first millennium BCE is a part of a slow shift to incorporate more visual evidence in research about colour and perception in the ancient world that has long been dominated by ethno linguistic studies Our scientifically grounded reconstructions serve as a prelude to a more comprehensive exploration of the materiality and aesthetics of Mesopotamian sculpture which open many windows onto historical cultural and symbolic issues In this study we trace the chronological development of the use of colours and consider why they changed over time The manner in which colours served as social markers of gender ethnicity and class for example are explored from the material culture and textual perspectives When used to describe hair skin and garments Sumerian and Akkadian words for colour denote more than just physical properties They also evoke qualities such as lightness or darkness dullness or glossiness and encode specific symbolic values that impinge on many aspects of society In all cultures the notion of skin colour is subject to social concepts prejudices and ideals and is thus a matter of convention Our discovery that the face and body in particular were so vibrantly coloured provides an entirely new and unexpected view of ancient Near Eastern effigies Through such luminous radiant and lucid colours we are now able to recognise the true faces of the statues and to visualise what was considered beautiful and acceptable to the gods

Identifying the Stones of Classical Hebrew Ephraim S.

Ayil, 2024-08-26 Since the translation of the Septuagint in the 3rd century BCE scholars have attempted to identify the stones that populate the biblical text This study rejects the long standing reliance on ancient translations for identifying biblical stones Despite the evident contradictions and historical inconsistencies scholars traditionally presumed these translations to

be reliable By departing from this approach this volume presents a novel synthesis of comparative linguistics and archeogemological data Through rigorous analysis of valid cognates it establishes correlations between Hebrew stone names and their counterparts in ancient languages corresponding to known mineral species This methodological shift enables a more accurate identification of stones mentioned in biblical texts thus recovering their true historical context The research not only advances our understanding of biblical mineralogy but also provides a fresh perspective on the material culture of the Ancient Levant offering valuable insights for scholars and laymen linguists and archaeologists alike Wall Paintings and Color Pigments of Ancient Mesopotamia Yoko Tomabechi,1980 Catalog of Copyright Entries, Third Series Library of Congress.
